#### COUNTY OF SACRAMENTO CALIFORNIA

For the Agenda of: February 11, 2014 Timed: 11:15 AM

To: Board of Supervisors

From: Department of Community Development

Subject: PLNP2013-00179. Affordable Housing Ordinance. Introduce An Ordinance

To Repeal The Existing Ordinance Related To Affordable Housing, And Reenact A New Ordinance Relating To Affordable Housing In Sacramento County Code, Waive Full Reading And Continue To February 25, 2014 For

Adoption. APN: County-wide. Environmental Determination: Exempt

Supervisorial

District(s): All

Contact: Chris Pahule, Senior Economic Development Specialist, 874-4447

#### Overview

On January 28, 2014, the Board of Supervisors considered a draft Affordable Housing Ordinance. Following deliberation of various assumptions and components of the draft Affordable Housing Ordinance, the Board of Supervisors modified and voted to approve the Affordable Housing Ordinance. The Affordable Housing Ordinance has been updated to reflect the Board's revisions and is attached to this report.

#### Recommendations

- 1. Receive and file the Residential Nexus Analysis dated August 2013;
- 2. Recognize the exempt status of the Ordinance; and
- 3. Introduce the Ordinance, waive full reading, and continue to February 25, 2014 for adoption.

#### Measures/Evaluation

Adoption of the Affordable Housing Ordinance implements a key strategy of the 2013 Housing Element and requires a biennial report be delivered to the Board of Supervisors outlining the performance of the affordable housing program.

#### **Fiscal Impact**

The adoption of the Affordable Housing Ordinance will set the fees to be collected on certain residential building permits. No additional action will be required.

#### **BACKGROUND**

On January 28, 2014, the Board of Supervisors (Board) heard testimony and considered staff's recommendation for an Affordable Housing Ordinance (Ordinance) based on a fee approach. Staff provided a report back on key assumptions and components of the draft Ordinance.

PLNP2013-00179. Affordable Housing Ordinance. Introduce An Ordinance To Repeal The Existing Ordinance Related To Affordable Housing, And Reenact A New Ordinance Relating To Affordable Housing In Sacramento County Code, Waive Full Reading And Continue To February 25, 2014 For Adoption. APN: County-wide. Environmental Determination: Exempt Page 2

Following deliberation, the Board revised staff's recommendations and voted to approve an Ordinance based on the following framework:

- Fee of \$2.50 per square foot of habitable floor area;
- No fee cap;
- At least 10 percent of the funds set aside for Extremely Low Income (ELI);
- Credit for fees if the developer, in a development agreement, agrees to construct affordable units on site or dedicate or reserve land for affordable units;
- 50 percent of the affordability fees collected shall be used to produce affordable housing in Large Development Projects;
- Review of the performance of the Ordinance by the Board of Supervisors; and,
- Administration of the program by the Sacramento Housing and Redevelopment Agency (SHRA) with priorities set by the Board based on recommendations from SHRA, in consultation with the County.

#### **DISCUSSION**

As the Board's action on January 28, 2014 revised the draft Ordinance, staff has updated the Ordinance and it is attached to this Board report.

The table below details the expected performance of the affordable housing program demonstrating that the \$2.50 per square foot fee will achieve a program of nearly 11 percent.

| Average Home Size   | 2,250 Sq. Ft. |
|---|---------------|
| Fee per Square Foot   | \$2.50        |
| Fee per Unit based on square footage                        | \$5,428       |
| Funds from every 1000 units (assumes a range of home sizes) | \$5,428,156   |
| Units produced assuming \$50,000 funding gap                | 109           |
| % of affordable units produced                              | 10.9%         |

Staff recommends that the Board introduce the Ordinance and continue the item for two weeks for adoption. Following adoption, SHRA, in consultation with the County, will prepare program guidelines for the Board's adoption.

#### **MEASURES/EVALUATION**

Adoption of the Affordable Housing Ordinance implements a key strategy of the 2013 Housing Element. Additionally, the Affordable Housing Ordinance requires that SHRA, in consultation with the County, prepare a biennial report on the performance of the affordable housing program, including the number of units produced, the amount of funds collected and the amount of funds expended.

PLNP2013-00179. Affordable Housing Ordinance. ORD - Ordinance of the Sacramento County Code Relating to Affordable Housing

ATT 1 - Residential Nexus Analysis

ATT 2 - Notice of Exemption

Agenda Date: 02-11-2014 Page 1 of 7

SCC NO.

### AN ORDINANCE OF THE SACRAMENTO COUNTY CODE RELATING TO AFFORDABLE HOUSING

The Board of Supervisors of the County of Sacramento, State of California, ordains as follows:

SECTION 1. Sections 22.35.010 through 22.35.180 of Chapter 22.35, Title 22, of the Sacramento County Code are repealed.

SECTION 2. Sections 22.35.010 through 22.35.110 are added to Chapter 22.35,

Title 22, of the Sacramento County Code to read as follows:

#### 22.35.010 Purpose.

- A. It is a public purpose of the County and a policy of the State to achieve a diverse and balanced community with housing available for households of all income levels. The County is committed to implementing policies and regulatory actions that will increase the supply of housing affordable to low, very low and extremely low income households. Because of a variety of factors and economic circumstances, including, but not limited to, increasing development costs, new residential development does not always provide housing for these economic groups. Further, the consumption of the remaining supply of suitable and available land exacerbates the County's on-going efforts to encourage and facilitate the production of housing that is affordable to persons of all income levels, including low, very low and extremely low income households.
- B. Housing Element Policy HE-5.2 (E3) provides that the County will review and amend as appropriate its Affordable Housing Ordinance to consider its effectiveness in producing affordable housing, its impact on the production of market rate housing, the current and projected future need for affordable housing in the County and the market's ability to meet that need, and options to streamline and/or clarify the Ordinance.
- C. The Legislature of the State of California has found that the lack of affordable housing is a critical problem which threatens the economic, environmental and social quality of life in California.
- D. To implement Policy HE-5-2 (E3), to carry out the policies of the State of California, to achieve the benefits of economic diversity for the residents of the County and to assist in making affordable housing available in the County for all income levels, it is essential that new residential development contain housing opportunities to households of low, very low and extremely low income, and that the County provide a regulatory framework which provides opportunities for development of a supply and mix of new housing to meet the future housing needs of all income segments of the community.

Agenda Date: 02-11-2014

Page 2 of 7

E. The Board of Supervisors finds and determines that the Residential Nexus Analysis prepared by Keyser Marston Associates, Inc. in August 2013 meets the requirements of Government Code for the implementation of an impact fee in that newly constructed units represent new households and new income in Sacramento County. These households will consume goods and services, either through purchases of goods and services or by "consuming" governmental services. New consumption translates to new jobs; a portion of the jobs are at lower compensation levels. Low compensation jobs translate to lower income households that cannot afford market rate units in the County and therefore need affordable housing. The affordability fee established herein is below the ceiling identified in the Residential Nexus Analysis which ranges from \$13.36 per square foot to \$24.20 per square foot depending on the unit type for eight prototype developments in the County for the impact fee requirement placed on market rate development.

F. The Board of Supervisors finds and determines that, based upon the above purposes and findings, there is a reasonable relationship between the need for affordable housing and the type of development projects that may meet their affordable obligation pursuant to this Chapter by payment of affordability fees.

#### 22.35.020 Definitions.

"Affordability fee" means the fee required by Section 22.35.050.

"Affordable" means rented at an affordable rent or sold at an affordable housing price.

"Affordable housing price" means a sales price at which low income or very low income households can qualify for the purchase of for-sale affordable units.

Qualification shall be based on no more than thirty-five (35) percent of income at eighty (80) percent, and fifty (50) percent of the median income applicable to Sacramento County, respectively for low income and very low income households, being applied to housing expenses, which shall include mortgage principal and interest, taxes, insurance, assessments, and homeowner fees, as applicable.

"Affordable housing plan" means the plan setting forth the elements of a development project's affordable housing requirements and the manner in which the affordable housing is to be implemented.

"Affordable housing unit" or "affordable unit" means an ownership or rental dwelling unit developed to be occupied at an affordable housing price or an affordable rent.

"Affordable rent" means: (1) for a unit whose occupancy is restricted to low income households, a monthly rent consisting of a maximum of one-twelfth of thirty (30) percent of eighty (80) percent of the median income applicable to Sacramento County; (2) for a unit whose occupancy is restricted to a very low income household, a monthly rent consisting of a maximum of one-twelfth of thirty (30) percent of fifty (50) percent of the median income applicable to Sacramento County. In all cases the median income applicable to Sacramento County is as determined annually by the United States Department of Housing and Urban Development. Maximum rent is adjusted for household size appropriate to the unit, less a reasonable allowance for utilities, as published by SHRA.

Agenda Date: 02-11-2014

Page 3 of 7

"Buy-down" means the subsidy needed to pay the difference in price between a very low income affordable unit and an extremely low income affordable unit.

"Construct" means to build or cause to be built.

"County" means the County of Sacramento.

"Credits for affordable housing units" means unit credits, purchased by SHRA prior to the effective date of this ordinance, for the construction of affordable housing units in excess of a previous affordable housing obligation.

"Developer" means any person, firm, partnership, association, joint venture, corporation, or any entity or combination of entities that seeks County's approvals for all or part of a development project. "Developer" includes "owner."

"Development agreement" means an agreement entered into pursuant to Government Code sections 65864 et seq.

"Development project" means any real estate development project in the unincorporated County that includes at least one dwelling unit. Projects at one location developed by the same owner or developer undertaken in phases, stages or otherwise developed in distinct sections shall be considered a single development project for purposes of this Section. "Development project" includes units and acreage associated with the affordable housing component

"Dwelling unit" means a residential unit within a development project.

"Extremely low income" or "ELI" means a household whose income does not exceed thirty (30) percent of the median income, adjusted for household size, applicable to the County, as published and periodically updated by the United States Department of Housing and Urban Development.

"Large development project" means a development project that includes at least 100 acres designated for residential units and includes at least 750 residential units.

"Market rate" means not restricted to an affordable housing price or affordable rent.

"Mobilehome park" has the same meaning as set forth in Zoning Code Section 130-126 or any successor section.

"Multifamily" means residential units planned, approved, or built on land planned or zoned for other than single-family residential.

"Newly constructed" means the habitable square footage of any primary residential unit that has not been previously occupied for any purpose, as set forth in Section 1107A, 14-N of the 2010 California Building Code, California Code of Regulations Title 24 Part 2, Volume 1 of 2. For the purposes of this Chapter, exceptions from this definition include accessory dwelling units, remodel or enlargement, or restoration of a dwelling unit which has been damaged or partially destroyed due to fire, flood, or earthquake.

"Regulatory agreement" means a written agreement incorporating affordable housing prices or affordable rent and occupancy restrictions, recorded as a lien on the affordable housing units.

"SHRA" means Sacramento Housing and Redevelopment Agency, a joint powers agency.

"Very low income" means a household whose income does not exceed fifty (50) percent of the median income, adjusted for household size, applicable to the County, as

Agenda Date: 02-11-2014

Page 4 of 7

published and periodically updated by the United States Department of Housing and Urban Development.

#### 22.35.030 Standard Affordable Housing Component.

- A. Development projects shall:
- 1. Pay an affordability fee on all newly constructed market rate units pursuant to Section 22.35.050(A); or
- 2. Comply with the development project's approved affordable housing plan; if one exists, or
- 3. Enter into a development agreement or other form of agreement with the County which provides for a fee credit for land dedication, construction of affordable dwelling units, or other mechanism which leads to the production of affordable housing, in an amount at least equivalent to the affordability fee established by Section 22.35.050(A).
- a. Land dedicated pursuant to section 22.35.030(A)(3) must be a site that is approved and accepted by SHRA and consistent with the guidelines prepared pursuant to section 22.35.100.
- b. Regulatory agreements shall be recorded and monitored by SHRA on all affordable housing units constructed pursuant to section 22.35.030(A)(3).
- B. Development projects may purchase credits for affordable housing units banked with SHRA prior to the effective date of this ordinance. Credits may be purchased in combination with payment of fees pursuant to section 22.35.030(A)(1) or land dedication, construction of units or other mechanism which leads to the production of affordable housing pursuant to section 22.35.030(A)(3).
- C. Development projects with a tentative subdivision map which was approved prior to the effective date of this ordinance and which contain density bonus units allowed pursuant to the repealed version of this Chapter may build according to that subdivision map.
- D. Development projects may enter into an agreement with the County that allows construction of new market rate housing without payment of an affordability fee if the developer has constructed affordable unit in advance of construction of market rate units pursuant to an affordable housing plan adopted prior to the effective date of this ordinance. The number of market rate units not subject to the affordability fee shall be calculated by dividing the number of affordable units by nine percent.

#### 22.35.040 Exempted Development Projects.

The following development projects are exempt from this Chapter and generate no affordable housing obligation:

- A. Conversion of nonresidential buildings to residential use;
- B. Mobilehome parks;
- C. Market rate and affordable units in a mixed-income development on a newly created multifamily site located on-site built at a density of 17 units per acre or more where at least twenty (20) percent of the units are affordable to low income renters or buyers. Affordable housing units shall have a regulatory agreement recorded and monitored by SHRA;

Agenda Date: 02-11-2014

Page 5 of 7

D. A new single-family residential structure built by an owner-builder on his or her property, provided that (1) the new home is not intended for sale within two years of completion of construction; (2) the owner has not utilized the exemption set forth in this Section 22.35.040 within two years of applying for a building permit for the new structure; and (3) the owner personally performs the work, or the owner directly contracts with a contractor to complete the project.

#### 22.35.050 Affordability Fees.

- A. The affordability fee is an amount equal to \$2.50 per habitable square foot of each market rate unit.
- B. The affordability fee shall be paid concurrently with the payment of building permit fees for the development project in accordance with the fee schedule in effect at the time of building permit application.
- C. The affordability fee, including the maximum amount of the fee, shall be adjusted annually based on the Building Cost Index 20-City Average published by Engineer News-Record/McGraw Hill. County shall publish the fee schedule.
- D. At least ten (10) percent of the affordability fees collected pursuant to this Section shall be used to buy down or produce ELI units.
- E. At least fifty (50) percent of the affordability fees collected shall be used to produce affordable housing in large development projects. The implementation of this provision shall be detailed in the Guidelines prepared pursuant to section 22.35.100.

### 22.35.060 Establishment and Administration of Fund for Affordability Fees.

- A. There is hereby created by the Office of the County Auditor-Controller in the County Treasury a special interest-bearing fund entitled the Fund for Affordability Fees. All fees collected pursuant to Section 22.35.050 and interest shall be placed in said fund and shall be expended solely to purchase land for affordable housing, produce or substantially rehabilitate affordable units, or buy down ELI units.
- B. The affordability fees collected shall be transferred to SHRA and administered by the SHRA Executive Director who shall have the authority to govern the fund consistent with this Chapter, established priorities pursuant to section 22.35.060(C), and the guidelines prepared pursuant to section 22.35.100. Transfer of affordability fees to SHRA shall occur no less than quarterly. A portion of the funds may be used to cover reasonable administrative expenses. SHRA and County administrative expenses shall be approved by the Board of Supervisors through the SHRA and County annual budget processes.
- C. The Board of Supervisors shall establish priorities for the use of the Fund. The SHRA Executive Director, in consultation with the County Director of Community Development, shall recommend priorities for the use of the funds for Board of Supervisors' approval on a biennial basis.
- D. The Executive Director of SHRA, in consultation with the County Director of Community Development, shall report biennially on the performance of the affordable housing program, including the number of units produced, the amount of funds collected and the amount of funds expended. The report shall also include the levels of affordability in units constructed pursuant to this Chapter.

Agenda Date: 02-11-2014

Page 6 of 7

#### 22.35.070 Quality.

Affordable units constructed using affordability fees paid pursuant to this Chapter, or constructed through a development agreement or other form of agreement pursuant to section 22.35.030(A)(3) shall be visually compatible with the market rate units and accommodate diverse family sizes by including units with different numbers of bedrooms, as determined by the approval authority, upon recommendation of the SHRA Executive Director. External building materials and finishes, front yard landscaping and amenities shall be of the same type and quality for affordable units as for market rate units.

#### 22.35.080 Accessibility.

A minimum of five (5) percent of the dwelling units (but not less than one (1) unit) in a multifamily project constructed using affordability fees paid pursuant to this Chapter shall be made accessible for persons with disabilities.

#### 22.35.090 Occupancy and Affordability Requirement.

- A. Any person who rents or owns an affordable unit shall occupy that unit as his or her principal residence.
- B. Rental affordable units shall remain affordable for a period of no less than fifty-five (55) years from recordation of the notice of completion for the rental units.
- C. For-sale affordable units shall remain affordable for a period of not less than thirty (30) years from the first sale of an individual property and from the date of any resale to an income-eligible buyer made at a time the affordable unit is subject to affordability restrictions under this Chapter.

#### 22.35.100 Guidelines.

The Executive Director of SHRA, in consultation with the County Director of Community Development, shall prepare guidelines to ensure compliance with this Chapter. The guidelines shall be adopted by resolution of the Board of Supervisors.

#### 22.35.110 Severability.

The Board of Supervisors of the County of Sacramento declares that should any section, paragraph, sentence, or word of this Chapter be declared for any reason to be invalid, it is the intent of the Board of Supervisors that it would have passed all other portions of this Chapter, independent of the provision declared invalid.

| SECTION 3. This ordinance was introduced and   | the title thereof read at the |

#### **SUMMARY REPORT**

The Summary Report provides a concise version of the major findings of the residential nexus analysis conducted to support an update to the Affordable Housing Ordinance in Sacramento County. All of the material is contained in more detail in the appendix sections that follow.

The Sacramento County Affordable Housing Ordinance was first adopted in 2004 with subsequent revisions in 2007. The program applies to the unincorporated areas of the County, and requires that 15% of new housing units must be affordable to very low and low income households. The ordinance allows projects with fewer than 100 units to pay a fee in-lieu of providing units and also provides a mechanism to fund housing units for Extremely Low Income Households.

As discussed in the County's Housing Element, three key factors have prompted a full review of the Affordable Housing Ordinance: 1) recent State Court decisions; 2) the economic downturn; and 3) the complexity of implementing the current ordinance. The County contracted with Keyser Marston Associates to conduct a residential nexus analysis, to be used as support for the County's revisions to the ordinance. This report provides the findings of the residential nexus analysis.

#### A. MARKET SURVEY AND RESIDENTIAL PROTOTYPES

In collaboration with County staff, a total of four market rate residential prototypes were selected for analysis – three ownership prototypes and one rental prototype. The intent of the selected prototypes is to identify representative developments generally being built by the private market-place in the unincorporated areas of Sacramento County, in order to gain a general understanding of the economic opportunities and challenges of new residential development today.

The prototypes are summarized in the following table. There are four distinct building types and each building type has two price points – low and high – for a total of eight prototypes. The two price points represent the approximate range of prices in different areas of the unincorporated county. More detailed information about the prototypes is included in Appendix II Table 1.

| Residential Prototypes                                | Density    | Avg. Unit Size |
|---|------------|----------------|
| For-Sale Prototypes*                                  |            |                |
| Lower Density Single Family Detached                  | 5 du/acre  | 2,200 sq. ft.  |
| 2) Medium Density Single Family Detached              | 7 du/acre  | 1,800 sq. ft.  |
| 3) Higher Density Attached (condominiums)             | 20 du/acre | 1,000 sq. ft.  |
| Rental Prototype*  4) 2- to 3-story Apartment Project | 20 du/acre | 950 sq. ft.    |

\*Note: In the residential nexus analysis, two price points for each prototype are being analyzed (a low price and a high price) representing the approximate range of prices in the unincorporated county.

Page 6 of 98

Since the purpose of the analysis is to examine the impact that the County's Affordable Housing Ordinance has on market rate development projects that would be impacted by the County's affordable housing requirements, these prototypes are all 100% market rate projects.

#### **B. RESIDENTIAL NEXUS ANALYSIS FINDINGS**

KMA prepared a Residential Nexus Analysis as a support document in light of recent California Supreme Court Decisions which make it advisable for jurisdictions to demonstrate the relationships between the development of market rate residential units and the need for additional affordable housing. The *Palmer* case in particular precludes jurisdictions from requiring the inclusion of affordable units in rental projects unless there is a negotiated agreement with the city or county in which the local government agrees to concessions. Jurisdictions may, however, require rental (and ownership) projects to pay an impact fee or negotiate for on-site units. This nexus analysis meets the requirements of the California Governmental Code for the implementation of an impact fee.

Following is an abbreviated version of the nexus analysis. For more information, the full report is contained in Appendix I.

#### 1. The Nexus Concept

At its most simplified level, the underlying nexus concept is that the newly constructed units represent new households and new income in Sacramento County. These households will consume goods and services, either through purchases of goods and services or by "consuming" governmental services. New consumption translates to new jobs; a portion of the jobs are at lower compensation levels. Low compensation jobs translate to lower income households that cannot afford market rate units in the County and therefore need affordable housing.

#### 2. Impact Methodology and Models Used

The analysis is performed using two models. The IMPLAN model is an industry accepted, commercially available model developed over 30 years ago to quantify the impacts of changes in a local economy, including the employment impacts of changes in personal income. The IMPLAN model is "inputted" with net new personal income in Sacramento County and moves through a series of adjustments to disposable income, a distribution of expenditures, and ultimately produces a quantification of jobs generated by industry. The KMA jobs housing nexus model, which was developed nearly 20 years ago to analyze the income structure of job growth, is used to determine the household income of new employee households, identifying how many are at lower income and housing affordability levels.

Page 7 of 98

#### 3. The Sacramento County Residential Prototypes

The residential prototypes described at the outset of this Summary report are the starting point of the nexus analysis. In particular, the sales prices or rent levels of the prototype units are linked to household income and new expenditures in the county. In the residential nexus analysis, two price points for each prototype are analyzed (a low price and a high price) representing the approximate range of prices in the unincorporated county.

KMA conducted a review of the residential real estate market to assign sales prices and rents to the prototypes. The sales prices and rents reflect the current market at the time of the survey, or early months of 2013. More information on this analysis is contained in Appendix II. The eight prototypes with current market rate sales prices or rent levels are:

| Nexus Analysis Prototypes                          |   |           |           |           |  |
|--|---|-----------|-----------|-----------|--|
| <u>Lower Density SFR</u> <u>Medium Density SFR</u> |   |           |           |           |  |
|  | Lower Price Higher Price Lower Price Higher |           |           |           |  |

From the sales prices and rent levels, household income is determined using assumptions with respect to a share of income spent on housing and housing purchase terms. For ownership units, 35% of income is spent on housing (including mortgage payments, insurance, property taxes and maintenance), a relationship that is grounded in state housing policy and also reflective of current lending practices. Renters are assumed to spend 30% of their income on rent. As a result, gross household income associated with each of the prototypes is as follows:

| Gross Household Income |             |              |                  |              |

| Gross Household Income          | \$42,000           | \$59,000      | \$48,000        | \$56,000     |

Page 8 of 98

The nexus analysis is conducted on 100-unit project modules for ease of presentation and to avoid awkward fractions.

#### 4. IMPLAN Model Results

The IMPLAN model was applied to link gross household income to household expenditures to job growth occurring in Sacramento County. The IMPLAN model first converts household income to disposable income by accounting for State and Federal income taxes, Social Security and Medicare (FICA) taxes, and personal savings. The model then distributes spending among various types of goods and services (industry sectors) based on data from the Consumer Expenditure Survey and the Bureau of Economic Analysis Benchmark input-output study, to estimate employment generated.

Job creation, driven by increased demand for products and services, was projected for each of the industries that will serve the new households. The employment generated by this new household spending is summarized below.

| Jobs Generated per 100 Units    |             |              |                 |              |
|---------------------------------|-------------|--------------|-----------------|--------------|
|                                 | Lower De    | ensity SFR   | <u>Medium D</u> | ensity SFR   |
|                                 | Lower Price | Higher Price | Lower Price     | Higher Price |
| Gross Household Income          | \$72,000    | \$85,000     | \$63,000        | \$76,000     |
| Total Jobs Generated, 100 units | 54.9        | 63.6         | 48.1            | 56.9         |

| Jobs Generated per 100 Units, c |                                   |          |                |               |
|---------------------------------|-----------------------------------|----------|----------------|---------------|
|                                 | Higher Density Attached 2-3 Story |          | 2-3 Story Apar | tment Complex |
|                                 | Lower Price Higher Price          |          | Lower Price    | Higher Price  |
| Gross Household Income          | \$42,000                          | \$59,000 | \$48,000       | \$56,000      |
| Total Jobs Generated, 100 units | 34.0                              | 45.0     | 38.9           | 42.7          |

The IMPLAN model quantifies jobs generated at establishments that serve new residents directly (i.e. supermarkets, banks or schools), jobs generated by increased demand at firms which service or supply these establishments (wholesalers, janitorial contractors, accounting firms, or any jobs down the service/supply chain from direct jobs), and jobs generated when the new employees spend their wages in the local economy and generate additional jobs.

In the full nexus report, jobs generated by the larger industry categories are indicated in the tables. Jobs in Eating and Drinking establishments represent the single greatest concentration. However if all retail categories were aggregated, even without the eating and drinking, they would be the single largest group of jobs. Medical related services represent another major job category.

Page 9 of 98

#### 5. Compensation Levels of Jobs and Household Income

The output of the IMPLAN model – the numbers of jobs by industry – are then "input" into the Keyser Marston Associates jobs housing nexus analysis model to quantify the compensation level of new jobs and the income of the worker households. The KMA model sorts the jobs by industry into jobs by occupation, based on national data, and then attaches local wage distribution data to the occupations, using recent Sacramento County data from the California Employment Development Department (EDD). The KMA model also converts the number of employees to the number of employee households, recognizing that there is, on average, more than one worker per household, and thus the number of housing units in demand for new workers is reduced.

The output of the model is the number of new worker households by income level (expressed in relation to the Area Median Income, or AMI) attributable to the new residential units and new households in Sacramento County. The income limits used in the analysis are those published by the California Department of Housing and Community Development (HCD). Typically, HCD uses the U.S. Department of Housing and Urban Development's income limits. However, the 2013 HUD income limits for Sacramento County actually dropped from 2012 levels. The 2013 income limits for Sacramento, therefore, reflect the implementation of HCD's 'hold harmless' policy, which allows the 2012 income limits to remain in effect instead of the lower income limits.

Following are the numbers of worker households by income level associated with the Sacramento County prototype units.

| New Worker Households by Income Level per 100 Market Rate Units |             |              |                    |              |  |  |

#### 6. Impact Fee Levels Supported by the Nexus Analysis

The last step in the analysis puts a dollar amount on the cost of mitigating the affordable housing impacts. The conclusions of the nexus analysis, expressed as the number of worker households by income affordability category, are linked to the cost of delivering housing to the households in need. Each income or affordability tier is associated with a subsidy needed to produce and deliver a unit at the specified affordability level.

The County intends to use the impact fee revenues to assist in the production of rental units for households in the Very Low and Low Income categories. KMA prepared an estimate of total development cost (inclusive of land, all fees and permits, financing and other indirect costs) for typical affordable rental units. KMA drew this estimate from a review of development pro forma summaries of recent affordable rental developments assisted by the Sacramento Housing & Redevelopment Agency (SHRA). KMA concluded that, on average, the new affordable rental units have 1.5 bedrooms and total development costs equal to \$223,000.

The affordability gap for rental units is the difference between the total development cost and the capitalized value of the affordable unit. To calculate the unit value, the net operating income (annual income less operating expenses) is capitalized at 6.75%. More information on the calculation of the affordability gaps can be found in Appendix II.

For the purposes of estimating the affordability gaps, we do not assume additional sources of affordable housing financing such as the federal income tax credit program. While many of the recent housing developments assisted by SHRA utilized these additional funding sources, it is not assured that these sources will always be available in the future. Accessing these sources is also highly competitive due to the limited supply. Finally, the value of tax credits to the project can fluctuate widely. Determining the affordability gap assuming no outside sources is a sound and legitimate approach, and one that the County has employed in other similar analyses. The City of Sacramento employs this approach as well.

The resulting affordability gaps are as follows:

- \$173,000 for households in the under 50% AMI category;
- \$105,000 for households in the 50% to 80% AMI category;

When the affordability gap conclusions for each income tier are linked to the number of affordable units required as a result of market rate development (as indicated in the inset table on the previous page) and divided by 100 units, the result is a Total Nexus Cost per new market rate residential unit. The results per unit are:

| Total Nexus Cost Per Market Rate Unit |                |                   |              |                 |              |  |
|---------------------------------------|----------------|-------------------|--------------|-----------------|--------------|--|

|---|---------------|-------------------------|--------------|--|--------------|---------------|
| / O-1   | Affordability | Higher Density Attached |              | Affordability Higher Density Attached 2-3 Story Apartment Co |              | tment Complex |
| Income Category Gap                           |               | Lower Price             | Higher Price | Lower Price  | Higher Price |               |
| Very Low Income                               | \$173,000     | \$11,500                | \$15,300     | \$13,100   | \$14,500     |               |
| Low Income                                    | \$105,000     | \$6,700                 | \$8,900      | \$7,700  | \$8,400      |               |
| Total Nexus Costs                             |               | \$18,200                | \$24,200     | \$20,800   | \$22,900     |               |

Developments with fewer than 100 units are currently allowed to pay an in-lieu fee instead of providing affordable units within the project. The current fee is \$5,600 per market rate unit. The fee is calculated by the County based on land costs and affordable subsidies. The maximum supported nexus cost far exceeds the recent fee level adopted by the County.

The Total Nexus Costs, or Mitigation Costs, indicated above, may also be expressed on a per square foot level. The square foot area of the prototype unit used throughout the analysis becomes the basis for the calculation. The results per square foot are as follows:

| Total Nexus Cost Per Sq. Ft. |                 |          |              |                   |              |       |

| Low Income                            | \$105,000     | \$6.70                  | \$8.90       | \$8.11                      | \$8.84       |  |  |
| Total Nexus Costs                     |               | \$18.20                 | \$24.20      | \$21.89                     | \$24.11      |  |  |

These costs express the total linkage or nexus costs for the eight prototype developments in Sacramento County. These total nexus costs represent the ceiling for any impact fee requirement placed on market rate development. The totals are not recommended levels for fees; they represent only the maximums established by this analysis, below which fees may be set.

**APPENDIX I: RESIDENTIAL NEXUS ANALYSIS** 

BOS ATTACHMENT 1 Agenda Date: 02-11-2014 Page 14 of 98

(This page intentionally left blank.)

Page 15 of 98

#### INTRODUCTION AND OVERVIEW

Keyser Marston Associates (KMA) has prepared this residential nexus analysis for Sacramento County per a contractual agreement. This report has been prepared to support revisions to the County's Affordable Housing Ordinance and to quantify the maximum impact fees supported, which may be applied to all residential projects. This residential nexus analysis addresses market rate residential projects and the various types of units that are subject to the Affordable Housing Ordinance, and quantifies the linkages between new market rate units and the demand for affordable housing generated by the residents of new units.

#### The Sacramento County Context and Purpose of Report

The Sacramento County Affordable Housing Ordinance was first adopted in 2004 with subsequent revisions in 2007. The program applies to the unincorporated areas of the County, and requires that 15% of new housing units must be affordable to very low and low income households. The ordinance allows projects with fewer than 100 units to pay a fee in-lieu of providing units and also provides a mechanism to fund housing units for Extremely Low Income Households.

As discussed in the County's Housing Element, three key factors have prompted a full review of the Affordable Housing Ordinance: 1) recent State Court decisions; 2) the economic downturn; and 3) the complexity of implementing the current ordinance. The County contracted with Keyser Marston Associates to conduct a residential nexus analysis which would be used as support for the County's revisions to the ordinance. This report provides the findings of the residential nexus analysis.

This analysis will demonstrate the percentage of affordable units supported and will also quantify impact fee levels supported from a nexus perspective. The analysis will also enable the County to restructure the program as it applies to rental projects so that rental projects may be charged an impact fee.

#### **The Nexus Concept**

At its most simplified level, the underlying nexus concept is that the newly constructed units represent new households in Sacramento County. These households represent new income in the county that will consume goods and services, either through purchases of goods and services or "consumption" of governmental services. New consumption translates to jobs; a portion of the jobs are at lower compensation levels; low compensation jobs relate to lower income households that cannot afford market rate units in Sacramento County and therefore need affordable housing.

#### **Use of This Study**

An impact analysis of this nature has been prepared for the limited purpose of determining nexus support to the County of Sacramento Affordable Housing Ordinance affecting new residential construction. It has not been prepared as a document to guide policy design in the broader context. We caution against the use of this study, or any impact study for that matter, for purposes beyond the intended use. All impact studies are limited and imperfect, but can be helpful for understanding the externalities created by new development.

The nexus analysis presented in this report is an impact analysis only and the nexus amounts are not recommended fee levels. The analysis has been prepared solely to demonstrate support for inclusionary measures and impact fees from the nexus perspective.

#### **Methodology and Models Used**

The methodology or analysis procedure for this nexus analysis starts with the sales price (or rental rate) of a new market rate residential unit, and moves through a series of linkages to the gross income of the household that purchased or rented the unit, the disposable income of the new household, the annual expenditures on goods and services, the jobs associated with the purchases and delivery of services, the income of the workers doings those jobs, the household income of the workers and, ultimately, the affordability level of the housing needed by the worker households. The steps of the analysis from household income to jobs generated were performed using the IMPLAN model, a model widely used for the past 35 years to quantify the impacts of changes in a local economy, including employment impacts from changes in personal income. From job generation by industry, KMA used its own jobs housing nexus model to quantify the income of worker households by affordability level.

To illustrate the linkages by looking at a simplified example, we can take an average household that buys a house at a certain price. From that price, we estimate the gross income of the household (from mortgage rates and lending practices) and the disposable income of the household. The disposable income, on average, will be used to "purchase" or consume a range of goods and services, such as purchases at the supermarket or services at the bank. Purchases in the local economy in turn generate employment. The jobs generated are at different compensation levels. Some of the jobs are low paying and as a result, even when there is more than one worker in the household, there are some lower and middle-income households who cannot afford market rate housing in Sacramento County.

The IMPLAN model quantifies jobs generated at establishments that serve new residents directly (e.g., supermarkets, banks or schools), jobs generated by increased demand at firms which service or supply these establishments, and jobs generated when the new employees spend their wages in the local economy and generate additional jobs. The IMPLAN model estimates the total impact combined.

Page 17 of 98

#### **Net New Underlying Assumption**

An underlying assumption of the analysis is that households that purchase or rent new units represent net new households in Sacramento County. If purchasers or renters have relocated from elsewhere in the county, vacancies have been created that will be filled. An adjustment to new construction of units would be warranted if Sacramento were experiencing demolitions or loss of existing housing inventory. However, the rate of housing unit removal is so low as to not warrant an adjustment or offset.

On an individual project basis, if existing units are removed to redevelop a site to higher density, then there could be a need for recognition of the existing households in that all new units might not represent net new households, depending on the program design and number of units removed relative to new units.

Since the analysis addresses net new households in Sacramento County and the impacts generated by their consumption expenditures, it quantifies net new demands for affordable units to accommodate new worker households. As such, the impact results do not address nor in any way include existing deficiencies in the supply of affordable housing.

#### **Geographic Area of Impact**

The analysis quantifies impacts occurring within all of Sacramento County and not just the unincorporated areas. While some of the impact will occur in the unincorporated areas, some impacts will be experienced in the City of Sacramento, other incorporated areas of the County and outside of the County. The IMPLAN model computes the jobs generated within the County and sorts out those that occur beyond the county boundaries. The KMA Jobs Housing Nexus Model analyzes the income structure of jobs and their worker households, without assumptions as to where the worker households live.

In summary, the KMA nexus analysis quantifies all the job impacts occurring within Sacramento County and related workers households. Job impacts, like most types of impacts, occur irrespective of political boundaries. And like other types of impact analyses, such as traffic, impacts beyond unincorporated county boundaries are experienced, are relevant, and are important. See Notes on Specific Assumptions at the end of this Appendix for further discussion.

#### **Disclaimers**

This report has been prepared using the best and most recent data available at the time of the analysis. Local data and sources were used wherever possible. Major sources include the U.S. Census Bureau: 2009-2011 American Community Survey, California Employment Development Department and the IMPLAN model. While we believe all sources utilized are sufficiently sound and accurate for the purposes of this analysis, we cannot guarantee their accuracy. Keyser Marston Associates, Inc. assumes no liability for information from these and other sources.

Page 18 of 98

#### A. MARKET RATE UNITS AND GROSS HOUSEHOLD INCOME

This section describes the prototypical market rate units that are subject to affordable housing requirements under the Sacramento County's Affordable Housing Ordinance and the income of the purchaser and renter households. Household income is the input to the IMPLAN model described in Section B of this report. These are the starting points of the chain of linkages that connect new market rate units to incremental demand for affordable residential units.

This section provides a summary of the prototypes and household income. More description and supporting tables are provided in Appendix II.

#### **Recent Housing Market Activity and Prototypical Units**

To identify the residential prototypes, KMA undertook a market survey of projects covering all types of residential units developed in unincorporated Sacramento County in recent years. The survey was taken in the winter/spring of 2012 and 2013, a period when the housing market in Sacramento is still suffering from the severe conditions brought on by the Great Recession.

The results of the market survey and the selection of prototypes are summarized in the table on the following page. The main objective of the survey was to establish current sales prices or rents per unit and per square foot for the various residential project types recently developed, or expected to be developed in the future, in unincorporated Sacramento County. Table A-1 at the end of this section provides a more detailed summary of the market rate prototypes. Note that four building types were identified and each building type has two price points, depending on the location within the county. Thus, in total, there are eight prototypes.

Total development costs were assembled for each of the prototype projects. The assumptions are based on data gathered from a variety of sources including third party market and cost data sources, KMA's experience with residential projects in other assignments, and discussions with Sacramento developers and other housing.

It is important to note that the prototypes analysis is intended to reflect average or typical residential projects in the Sacramento County market rather than the economics for any specific project. It would be expected that the economics for specific projects would vary to some degree from the prototypes analysis contained herein.

In summary, the prototypes tested in the nexus analysis are as follows:

| Nexus Analysis Prototypes |                                     |              |             |              |  |  |

#### **Income of Housing Unit Purchasers or Renter**

After the prototypes are established, the next step in the analysis is to determine the income of the purchasing or renting households in the prototypical units. The gross household income of the purchasers or renters is the input to the IMPLAN model.

#### Ownership Units

To make the determination for ownership units, terms for the purchase of residential units used in the analysis are slightly less favorable than what can be achieved at the current time since current terms are not likely to endure. The selected terms for the analysis are: 10% down payment, 30 year fixed rate mortgage, 5.0% interest rate. Tables A-2 through A-7 at the end of this section provide the details.

The single family detached units include as expenses an allowance for maintenance. The attached unit prototypes include as expenses monthly homeowners' association (HOA) dues, per industry practice. All ownership product types include an estimate of mortgage insurance, homeowners' insurance and property taxes as well. A key assumption is that housing costs run, on average, at about 35% of gross income. In the past, lending institutions have been willing to accept higher than 35% for all debt as a share of income, but most households have other forms of debt, such as auto loans, student loans, and credit card debt.

#### Apartment Units

The standard for relating annual rent to household income is 30%, excluding utilities. While leasing agents and landlords may permit rental payments to represent a slightly higher share of total income, 30% represents an average. This is based on that fact that renters are also likely to have other debt, and that many do not choose to spend more than 30% of their income on rent, since, unlike an ownership situation, the unit is not viewed as an investment with value enhancement potential. The resulting relationship is that annual household income is 3.3 times annual rent.

The estimated gross household incomes of the purchasers or renters of the prototype units are calculated in tables A-2 through A-9, and summarized below.

| D    | 20 | - C   | ഹ  |

|                                 | Lower Price        | Higher Price  | Lower Price                 | Higher Price |  |
| Gross Household Income          | \$42,000           | \$59,000      | \$48,000                    | \$56,000     |  |

The nexus analysis is conducted on 100-unit building modules for ease of presentation, and to avoid awkward fractions. Tables A-10 and A-11 summarize the conclusions of this section and calculate the total gross household income for the 100-unit building modules. This is the input into the IMPLAN model.

#### **B. THE IMPLAN MODEL**

Consumer spending by residents of new housing units will create jobs, particularly in sectors such as restaurants, health care, and retail, which are closely connected to the expenditures of residents. The widely used economic analysis tool, IMPLAN (IMpact Analysis for PLANning), was used to quantify these new jobs by industry sector.

#### **IMPLAN Model Description**

The IMPLAN model is an economic analysis software package now commercially available through the Minnesota IMPLAN Group. IMPLAN was originally developed by the U.S. Forest Service, the Federal Emergency Management Agency, and the U.S. Department of the Interior Bureau of Land Management and has been in use since 1979 and refined over time. It has become a widely used tool for analyzing economic impacts for a broad range of applications from major construction projects to natural resource programs.

IMPLAN is based on an input-output accounting of commodity flows within an economy from producers to intermediate and final consumers. The model establishes a matrix of supply chain relationships between industries and also between households and the producers of household goods and services. Assumptions about the portion of inputs or supplies for a given industry likely to be met by local suppliers, and the portion supplied from outside the region or study area are derived internally within the model using data on the industrial structure of the region.

The output or result of the model is generated by tracking changes in purchases for final use (final demand) as they filter through the supply chain. Industries that produce goods and services for final demand or consumption must purchase inputs from other producers, which in turn, purchase goods and services. The model tracks these relationships through the economy to the point where leakages from the region stop the cycle. This allows the user to identify how a change in demand for one industry will affect a list of over 400 other industry sectors. The projected response of an economy to a change in final demand can be viewed in terms of economic output, employment, or income.

Data sets are available for each county and state, so the model can be tailored to the specific economic conditions of the region being analyzed. This analysis utilizes the data set for Sacramento County. As will be discussed, much of the employment impact is in local-serving sectors, such as retail, eating and drinking establishments, and medical services. While some of the impact will occur in the unincorporated areas, some impacts will be experienced in the City of Sacramento, other incorporated areas of the county and outside of the county. In fact, Sacramento is part of the larger regional economy and impacts will likewise extend throughout the region. However, consistent with the conservative approach taken in the nexus analysis, only the impacts that occur within Sacramento County are included in the analysis. The IMPLAN model computes the jobs generated within the county and sorts out those that occur beyond the county boundaries.

#### Application of the IMPLAN Model to Estimate Job Growth

The IMPLAN model was applied to link gross household income to household expenditures to job growth occurring in Sacramento County. Employment generated by the household income of residents is analyzed in modules of 100 residential units to simplify communication of the results and avoid awkward fractions. The IMPLAN model first converts household income to disposable income by accounting for State and Federal income taxes, Social Security and Medicare (FICA) taxes, and personal savings. The model then distributes spending among various types of goods and services (industry sectors) based on data from the Consumer Expenditure Survey and the Bureau of Economic Analysis Benchmark input-output study, to estimate employment generated.

Job creation, driven by increased demand for products and services, was projected for each of the industries that will serve the new households. The employment generated by this new household spending is summarized below.

| Jobs Generated per 100 Units    |                          |            |                    |              |  |  |  |  |  |
|---------------------------------|--------------------------|------------|--------------------|--------------|--|--|--|--|--|

| Jobs Generated per 100 Units, c |                   |               |                             |          |  |  |
|---------------------------------|-------------------|---------------|-----------------------------|----------|--|--|
|                                 | <u>Higher Den</u> | sity Attached | 2-3 Story Apartment Complex |          |  |  |
|                                 | Lower Price       | Lower Price   | Higher Price                |          |  |  |
| Gross Household Income          | \$42,000          | \$59,000      | \$48,000                    | \$56,000 |  |  |
| Total Jobs Generated, 100 units | 34.0              | 45.0          | 38.9                        | 42.7     |  |  |

Table B-1 provides a detailed summary of employment generated by industry. The table shows industries sorted by projected employment. Expenditure patterns vary by income level, and the IMPLAN results are calculated according to the income bracket. For this analysis, there are three household income categories: \$75,000 - \$100,000 (Lower Density SFR – higher price and Medium Density SFR – higher price), \$50,000 - \$75,000 (Lower Density SFR – lower price and Medium Density SFR – lower price, Higher Density Attached – higher price, and the higher rent apartment) and \$35,000 - \$50,000 (Higher Density Attached – lower price and the lower rent apartment). Estimated employment is shown for each IMPLAN industry sector representing 1% or more of total employment. The jobs that are generated within the county are heavily retail jobs, jobs in restaurants and other eating establishments, and in services that are provided locally such as health care and real estate.

The jobs counted in the IMPLAN model cover all jobs, full and part time, similar to the U.S. Census and all reporting agencies (unless otherwise indicated).

#### Notes

<sup>1</sup> The IMPLAN model tracks how increases in consumer spending creates jobs in the local economy. See Nexus Analysis Tables 9 and 10 for estimates of the gross income of residents of the prototypical 100 unit buildings. The model produces results by income category. For this analysis, there are three household income categories: \$75,000 - \$100,000 (Prototypes 1B and 2B), \$50,000 - \$75,000 (Prototypes 1A, 2A, 3B, and 4B) and \$35,000 - \$50,000 (Prototypes 3A and 4A). Expenditures patterns, and therefore, occupation distribution, varies by income category.

For Industries representing more than 1% of total employment for any of the two IMPLAN income categories (see note 1).

#### C. THE KMA JOBS HOUSING NEXUS MODEL

This section presents a summary of the analysis linking the employment growth associated with residential development, or the output of the IMPLAN model (see Section B), to the estimated number of lower income housing units required in each of three income categories, for each of the eight residential prototype units.

#### **Analysis Approach and Framework**

The analysis approach is to examine the employment growth for industries related to consumer spending by residents in the 100-unit modules. Then, through a series of linkage steps, the number of employees is converted to households and housing units by affordability level. The findings are expressed in terms of numbers of affordable households per 100 market rate units.

The analysis addresses the affordable unit demand associated with single family detached, single family attached and rental units in Sacramento County. The table below shows the 2013 Sacramento County Area Median Income (AMI), as well as the income limits for the income categories that were evaluated: 50% and 80% of AMI. The income definitions used in the analysis are those published by the California Department of Housing and Community Development (HCD). Typically, HCD uses the U.S. Department of Housing and Urban Development's income limits. However, the 2013 HUD income limits for Sacramento County actually dropped from 2012 levels. The 2013 income limits for Sacramento County, therefore, reflect the implementation of HCD's 'hold harmless' policy, which allows the 2012 income limits to remain in effect instead of the lower income limits.

The income categories are consistent with those included in the County's Affordable Housing Ordinance.

| 2013 Income Limits for Sacramento County |          |          |          |          |          |          |  |  |  |
|--|----------|----------|----------|----------|----------|----------|--|--|--|
| Household Size (Persons)                 |          |          |          |          |          |          |  |  |  |
|  | 1        | 2        | 3        | 4        | 5        | 6+       |  |  |  |
| 50% of Median                            | \$26,650 | \$30,450 | \$34,250 | \$38,050 | \$41,100 | \$44,150 |  |  |  |
| 80% of Median                            | \$42,650 | \$48,750 | \$54,850 | \$60,900 | \$65,800 | \$70,650 |  |  |  |
| Area Median Income                       | \$53,250 | \$60,900 | \$68,500 | \$76,100 | \$82,200 | \$88,300 |  |  |  |

The analysis is conducted using a model that KMA developed and has applied to similar evaluations in many other jurisdictions. The model inputs are all local data to the extent possible, and are fully documented in the following description.

#### **Analysis Steps**

The tables at the end of this section present a summary of the nexus analysis steps for the prototype units. Following is a description of each step of the analysis.

BOS ATTACHMENT 1 Agenda Date: 02-11-2014 Page 38 of 98

Step 1 – Estimate of Total New Employees

Table C-1 commences with the total number of employees associated with the new market rate units. The employees were estimated based on household expenditures of new residents using the IMPLAN model (see Section B).

#### Step 2 – Adjustment from Employees to Employee Households

This step (Table C-1) converts the number of employees to the number of employee households, recognizing that there is, on average, more than one worker per household, and thus the number of housing units in demand for new workers is reduced. The workers-perworker-household ratio eliminates from the equation all non-working households, such as retired persons, students, and those on public assistance. The County average of 1.53 workers per worker household (from the U. S. Census Bureau 2009-2011 American Community Survey) is used for this step in the analysis. The number of jobs is divided by 1.53 to determine the number of worker households. (Average workers related to all households is a lower ratio because all households are counted in the denominator, not just worker households; using average workers per total households would produce greater demand for housing units.) The 1.53 ratio covers all workers, full and part time.

#### Step 3 – Occupational Distribution of Employees

The occupational breakdown of employees is the first step to arrive at income level. The output from the IMPLAN model provides the number of employees by industry sector. The IMPLAN output is paired with data from the Department of Labor, Bureau of Labor Statistics May 2011 Occupational Employment Survey (OES) to estimate the occupational composition of employees for each industry sector.

Pairing of OES and IMPLAN data was accomplished by matching IMPLAN industry sector codes with the four-digit North American Industry Classification System Code (NAICS) used in the OES. Each IMPLAN industry sector is associated with one or more NAICS codes, with matching NAICS codes ranging from two to five digits. Employment for IMPLAN sectors with multiple matching NAICS codes was distributed among the matching codes based on the distribution of employment among those industries at the national level. Employment for IMPLAN sectors where matching NAICS codes were only at the two- or three-digit level of detail was distributed using a similar approach, among all of the corresponding four-digit NAICS codes falling under the broader two- or three-digit categories.

National-level employment totals for each industry within the OES were pro-rated to match the employment distribution projected using the IMPLAN model, which varies by income category. Occupational composition within each industry was held constant. The result is the estimated occupational mix of employees, by income category. Table C-2 presents a summary of the results for the Lower Density SFR – higher price and Medium Density SFR – higher price. Table

BOS ATTACHMENT 1 Agenda Date: 02-11-2014

Page 39 of 98

C-3 presents the results for the Lower Density SFR – lower price, Medium Density SFR – lower price, Higher Density Attached – higher price, and the higher rent apartment) and Table C-4 presents the rest of the prototypes.

As shown on Table C-1, new jobs will be distributed across a variety of occupational categories. The three largest occupational categories are office and administrative support (18-19%), sales (15-17%), and food preparation and serving (12-13%). Step 3 of Table C-1 indicates both the percentage of total employee households and the number of employee households by occupation associated with 100-unit market rate units.

#### Step 4 – Estimates of Employee Households Meeting the Lower Income Definitions

In this step, occupation is translated to income based on recent Sacramento County wage and salary information from the California Employment Development Department. The wage and salary information summarized in Tables C-5, C-6 and C-7 (by household income) provided the income inputs to the model. This step in the analysis calculates the number of employee households that fall into each income category for each household size.

Individual *employee* income data was used to calculate the number of *households* that fall into the income categories by assuming that multiple earner households are, on average, formed of individuals with similar incomes. Employee households not falling into one of the major occupation categories per Tables C-2 through C-4 are assumed to have the same income distribution as the major occupation categories as a whole.

#### Step 5 – Estimate of Household Size Distribution

In this step, household size distribution was input into the model in order to estimate the income and household size combinations that meet the income definitions for Sacramento County. The household size distribution utilized in the analysis is that of worker households in Sacramento County derived using American Community Survey (ACS) data. The model employs a distribution of the number of workers per household by household size. For example, four-person worker households can have one, two, three, or four workers in the household. The model uses ACS data to develop a distribution of the number of the workers per worker household, by household size.

#### Step 6 – Estimate of Households that Meet Size and Income Criteria

For this step KMA built a cross-matrix of household size and income to establish probability factors for the two criteria in combination. For each occupational group a probability factor was calculated for each income level and household size/number of workers combination, and multiplied by the number of households. Table C-8 shows the result after completing Steps 4, 5, and 6. The calculated number of households that meet size and income criteria shown are for

BOS ATTACHMENT 1 Agenda Date: 02-11-2014 Page 40 of 98

the under 50% of AMI category generated by 100 market rate prototype units. The methodology was repeated for the other income tier, resulting in a total count of worker households per 100

#### **Summary Findings**

units.

Table C-9 indicates the results of the analysis for the residential prototype units. The table presents the number of households generated in each affordability category and the total number over 80% of Area Median Income.

According to Table C-9, approximately 60% of new worker households generated by the expenditures of new residents have incomes below 80% of AMI, including 30% earning less than 50% of AMI. The finding that the jobs associated with consumer spending tend to be low-paying jobs where the workers will require housing affordable at the lower income levels is not surprising. As noted above, direct consumer spending results in employment that is concentrated in lower paid occupations including food preparation, administrative, and retail sales.

The findings in Table C-9 are presented below. The table shows the total demand for affordable housing units associated with 100 market rate units.

| New Worker Households by Income Level per 100 Market Rate Units |                          |            |                 |              |  |  |  |  |

BOS ATTACHMENT 1 Agenda Date: 02-11-2014 Page 41 of 98

### Comparison of Analysis Results to Affordable Housing Ordinance

The analysis findings identify how many lower income households are generated for every 100 market rate units. These findings are adjusted to percentages for purposes of comparison to inclusionary requirements. The percentages are calculated including both market rate and affordable units (for example, 25 affordable units per 100 market rate units translates to a project of 125 units; 25 affordable units out of 125 units equals 20%).

The inset table below presents the results of the analysis, drawn from Table C-10. Each tier is cumulative, or inclusive of the tiers above. It is recalled that a Court decision (*Palmer*) precludes jurisdictions from requiring affordable on-site units that limit initial rents and on-going rent levels. Instead cities may require an impact fee. Therefore, the inclusionary percentages supported by rental units are not calculated.

| Cumulative Inclusionary Percentage Supported by Nexus Analysis, Ownership Units |          |            |                 |            |            |               |  |
|---|----------|------------|-----------------|------------|------------|---------------|--|
|   | Lower De | ensity SFR | <u>Medium</u> D | ensity SFR | Higher Den | sity Attached |  |
| Price Point   | Lower    | Higher     | Lower           | Higher     | Lower      | Higher        |  |
| Very Low Income   | 9.7%     | 11.3%      | 8.6%            | 10.2%      | 6.2%       | 8.1%          |  |
| Low Income  | 17.4%    | 19.8%      | 15.6%           | 18.1%      | 11.6%      | 14.7%         |  |

The findings of the analysis are presented for each of the ownership prototypes. The analysis supports inclusionary percentages between 11.6% and 19.8%. The Higher Density Attached prototypes do not currently support a 15% requirement. This is due to the lower current sales prices for these units due to the economic downturn and the resulting drop in housing prices.

The onsite requirement contained in the current ordinance requires developers to set aside 10% of units to Very Low Income households and 5% of units to Low Income households. Only two prototypes, the Lower Density SFR – Higher Price and the Medium Density SFR – Higher Price, support a 10% Very Low inclusionary requirement at current prices.

#### **Market Improvement Scenario**

The analysis above presents the supported inclusionary percentages given current sales prices, which are still very low as a result of the economic downturn. Given that home prices are expected to continue to rise over the next several years, KMA also calculated the supported inclusionary percentages under a market improvement scenario. Per the County's direction, the nexus calculations were re-run under a scenario in which home prices increase between current prices and prices that might exist in 2017, the mid-point of the County's Housing Element planning period of 2013-2021. For purposes of this market improvement scenario, KMA utilized a market projection made by Real Estate Economics, a third party source of residential market data and analysis. According to Real Estate Economics, median home prices in the Sacramento-Arden-Arcade-Roseville MSA are projected to rise 21.7% between 2013 and 2017. KMA applied this 20% (rounded) growth factor to each prototype's current sales price and

Page 42 of 98

calculated the supported inclusionary percentage given the higher sales prices. The results are shown in the table below.

| Market Improvement Scenario: Cumulative Inclusionary Percentage Supported by Nexus Analysis |                    |                    |                    |                    |                         |                   |  |
|---|--------------------|--------------------|--------------------|--------------------|-------------------------|-------------------|--|
| Lower Density SFR   |                    |                    | Medium Density SFR |                    | Higher Density Attached |                   |  |
| Price Point   | Lower              | Higher             | Lower              | Higher             | Lower                   | Higher            |  |
| Estimated Sales Price in 2017 Very Low Income   | \$312,000<br>11.0% | \$384,000<br>12.9% | \$282,000<br>10.0% | \$348,000<br>11.7% | \$180,000<br>7.2%       | \$270,000<br>9.4% |  |
| Low Income  | 19.5%              | 22.4%              | 17.8%              | 20.6%              | 13.2%                   | 16.8%             |  |

Under the Market Improvement Scenario, the Lower Density and Medium Density prototypes support the current onsite obligation (10% Very Low and 5% Low). The Higher Density Attached unit with the Higher Price supports a 15% obligation, but does not support a 10% Very Low obligation. Note that the lower priced Higher Density Attached product still does not meet the 15% threshold, even with a 20% increase in sales prices. As discussed in Appendix II, however, this product type suffered greatly during the recession, and KMA estimates that in order for development of these units to be feasible, a 45% increase in sales prices must occur (net of any increase in construction costs or land prices). See Appendix II for more information.

#### Conclusion

For ownership units, the analysis has demonstrated that the overall percentage requirement embodied in the current Sacramento Affordable Housing Ordinance is supported by the residential nexus analysis for most of the prototypes analyzed. The new households that buy new units in Sacramento generate impacts, through their expenditures on goods and services, which results in demand for additional affordable units in amounts higher than the current Affordable Housing Ordinance requires. The exception is the Higher Density Attached product, which was the product type most impacted by declining sale prices (see Appendix II for more discussion). If the supported inclusionary percentages for the two Higher Density Attached products are averaged together, the result given the improved market pricing is a total supported inclusionary percentage of 15%, which supports the current onsite requirement. The use of averages is an approach employed in other public policy applications, including impact fee analyses. The onsite requirement that developers set aside 10% of units for Very Low income households is not supported under current market conditions. It is expected that over the next five years, market sales prices should improve enough such that this requirement will be supported by all prototypes except the Higher Density Attached product.

The nexus analysis presented in this report is an impact analysis only and not recommended levels. The analysis has been prepared solely to demonstrate support for inclusionary measures and impact fees from the nexus perspective.

#### Notes:

Estimated employment generated by household expenditures within 100 prototypical market rate units. Employment estimates are based on the IMPLAN Group's economic model, IMPLAN, for Sacramento County. Estimates vary by household income level. For this analysis, there are three household income categories: \$75,000 - \$100,000 (Prototypes 1B and 2B), \$50,000 - \$75,000 (Prototypes 1A, 2A, 3B, and 4B) and \$35,000 - \$50,000 (Prototypes 3A and 4A). Expenditures patterns, and therefore, occupation distribution, varies by income category.

<sup>&</sup>lt;sup>2</sup> Adjustment from number of workers to number of households based on ratio of 1.53 workers per worker household derived from the U.S. Census American Community Survey 2009 to 2011.

<sup>&</sup>lt;sup>3</sup> See Appendix B tables for additional information on Major Occupation Categories.

<sup>&</sup>lt;sup>1</sup> The methodology utilized by the California Employment Development Department (EDD) assumes that hourly paid employees are employed full-time. Annual compensation is calculated by EDD by multiplying hourly wages by 40 hours per work week by 52 weeks.

<sup>&</sup>lt;sup>2</sup> Occupation percentages are based on the 2011 National Industry - Specific Occupational Employment survey compiled by the Bureau of Labor Statistics. Wages are based on the 2011 Occupational Employment Survey data for Sacramento, updated by the California Employment Development Department to 2012 wage levels.

<sup>&</sup>lt;sup>3</sup> Including occupations representing 4% or more of the major occupation group

<sup>&</sup>lt;sup>1</sup> The methodology utilized by the California Employment Development Department (EDD) assumes that hourly paid employees are employed full-time. Annual compensation is calculated by EDD by multiplying hourly wages by 40 hours per work week by 52 weeks.

<sup>&</sup>lt;sup>2</sup> Occupation percentages are based on the 2011 National Industry - Specific Occupational Employment survey compiled by the Bureau of Labor Statistics. Wages are based on the 2011 Occupational Employment Survey data for Sacramento, updated by the California Employment Development Department to 2012 wage levels.

<sup>&</sup>lt;sup>1</sup> The methodology utilized by the California Employment Development Department (EDD) assumes that hourly paid employees are employed full-time. Annual compensation is calculated by EDD by multiplying hourly wages by 40 hours per work week by 52 weeks.

88.4%

<sup>&</sup>lt;sup>2</sup> Occupation percentages are based on the 2011 National Industry - Specific Occupational Employment survey compiled by the Bureau of Labor Statistics. Wages are based on the 2011 Occupational Employment Survey data for Sacramento, updated by the California Employment Development Department to 2012 wage levels.

<sup>&</sup>lt;sup>3</sup> Including occupations representing 4% or more of the major occupation group

#### **D. MITIGATION COSTS**

This section takes the conclusions of the previous section on the number of households in the lower income categories associated with the market rate units and identifies the total cost of assistance required to make housing affordable. This section puts a cost on the units for each income level to produce the "total nexus cost." This is done for each of the prototype units.

A key component of the analysis is the size of the gap between what households can afford and the cost of producing new housing in Sacramento County, known as the 'affordability gap.' Affordability gaps are calculated for each of the categories of area median income: Very Low (up to 50% of median), and Low (50% to 80%). A detailed description of calculation of affordability gaps is contained in Appendix II. A brief summary is included below.

#### **County Assisted Prototypes**

For estimating the affordability gap, there is a need to match a household of each income level with a unit type and size according to governmental regulations and County practices and policies. Sacramento County intends to assist in the production of rental units for households in the Very Low (less than 50% of median income) and Low (50 – 80% of median income) income categories.

KMA prepared an estimate of total development cost (inclusive of land, all fees and permits, financing and other indirect costs) for typical affordable rental units. KMA drew this estimate from a review of development pro forma for recent affordable rental developments assisted by the Sacramento Housing & Redevelopment Agency (SHRA). KMA concluded that, on average, the new affordable rental units have 1.5 bedrooms and total development costs equal to \$223,000.

For many new developments, particularly County-assisted developments, total development costs could be higher than those estimated here. The conservative (or lower) estimate of development costs results in a lower supportable nexus amount.

For the purposes of estimating the affordability gaps, we do not assume additional sources of affordable housing financing such as the federal income tax credit program. While many of the recent housing developments assisted by SHRA utilized these additional funding sources, it is not assured that these sources will be available in the future. Accessing these sources is also highly competitive due to the limited supply. Finally, the value of tax credits to the project can fluctuate widely. Determining the affordability gap assuming no outside sources is a sound and legitimate approach, and one that the County has employed in other similar analyses.

For reference, KMA also produced an estimate of the affordability gaps assuming tax credit financing is available. See Appendix II for more information.

BOS ATTACHMENT 1 Agenda Date: 02-11-2014 Page 60 of 98

### **Affordability Gap**

The affordability gap is the difference between the cost of developing a residential unit and the amount a household can afford to pay for the unit. For rental units, the Affordability Gap is the difference between the Total Development Cost and the Unit Value, which is the capitalized value of the project's net operating income. Appendix II includes a full discussion of the affordable rent levels, the calculation of unit value supported by the restricted rent levels, and affordability gaps.

To calculate Net Operating Income, gross rent is adjusted for vacancy rates during turnover, and then operating costs are netted out. Operating costs cover management, property taxes, and certain other expenses. Net operating income is then capitalized at 6.75% to estimate the Supported Unit Value. This value is then subtracted from Total Development Costs to calculate the gap.

The resulting affordability gaps are as follows:

- \$173,000 for households in the under 50% AMI category;
- \$105,000 for households in the 50% to 80% AMI category;

#### **Total Linkage Costs**

The last step in the linkage fee analysis marries the findings on the numbers of households in each of the lower income ranges associated with the eight prototypes to the affordability gaps, or the costs of delivering housing to them in Sacramento County.

Table D-1 summarizes the analysis. The Affordability Gaps are drawn from the prior discussion. The "Nexus Cost per Market Rate Unit" shows the results of the following calculation: the affordability gap times the number of affordable units demanded per market rate unit. (Demand for affordable units for each of the income ranges is drawn from Table C-9 in the previous section and is adjusted to a per-unit basis from the 100 unit building module.)

The total nexus costs for each of the prototypes are as follows:

| Total Nexus Cost Per Market Rate Unit |               |                   |          |  |          |            |  |  |  |
|---------------------------------------|---------------|-------------------|----------|--|----------|------------|--|--|--|
| Income Category                       | Affordability | Lower Density SFR |          | Affordability Lower Density SFR Medium Den |          | ensity SFR |  |  |  |
| Price Point                           | Gap           | Lower             | Higher   | Lower                                      | Higher   |            |  |  |  |
| Very Low Income                       | \$173,000     | \$18,600          | \$22,000 | \$16,300                                   | \$19,600 |            |  |  |  |
| Low Income                            | \$105,000     | \$10,800          | \$12,700 | \$9,500                                    | \$11,300 |            |  |  |  |
| Total Nexus Costs                     |               | \$29,400          | \$34,700 | \$25,800                                   | \$30,900 |            |  |  |  |

| Total Nexus Costs            |               | \$13.36   | \$15.77           | \$14.33  | \$17.17   |  |  |  |

| Total Nexus Cost Per Sq. Ft., cont'd. |               |                         |          |                             |         |  |  |  |  |
|---------------------------------------|---------------|-------------------------|----------|-----------------------------|---------|--|--|--|--|
| Income Category                       | Affordability | Higher Density Attached |          | 2-3 Story Apartment Complex |         |  |  |  |  |
| Price Point                           | Gap           | Lower                   | Higher   | Lower                       | Higher  |  |  |  |  |
| Prototype Size (Sq Ft)                |               | 1,000 SF                | 1,000 SF | 950 SF                      | 950 SF  |  |  |  |  |
| Very Low Income                       | \$173,000     | \$11.50                 | \$15.30  | \$13.79                     | \$15.26 |  |  |  |  |
| Low Income                            | \$105,000     | \$6.70                  | \$8.90   | \$8.11                      | \$8.84  |  |  |  |  |
| Total Nexus Costs                     |               | \$18.20                 | \$24.20  | \$21.89                     | \$24.11 |  |  |  |  |

These costs express the total linkage or nexus costs for the eight prototype developments in the County of Sacramento. These total nexus costs represent the ceiling for any requirement placed on market rate development. The totals are not recommended levels for fees; they represent only the maximums established by this analysis, below which fees or other requirements may be set.

## ADDENDUM: NOTES ON SPECIFIC ASSUMPTIONS

## **Geographic Area of Impact**

The analysis quantifies impacts occurring throughout Sacramento County and not just in the unincorporated areas. While some of the impact will occur in the unincorporated areas, some impacts will be experienced in the City of Sacramento, other incorporated areas of the county and outside of the county. The IMPLAN model computes the jobs generated within the county and sorts out those that occur beyond the county boundaries. The KMA Jobs Housing Nexus Model analyzes the income structure of jobs and their worker households, without assumptions as to where the worker households live.

In summary, the nexus analysis quantifies all the jobs impacts occurring within Sacramento County and related workers households. Job impacts, like most types of impacts, occur irrespective of political boundaries. And like other types of impact analyses, such as traffic, impacts beyond unincorporated county boundaries are experienced, are relevant, and are important.

For clarification, counting all impacts associated with new housing units does not result in double counting, even if all jurisdictions were to adopt similar programs. The impact of a new housing unit is only counted once, in the jurisdiction in which it occurs. Obviously, within a metropolitan region, there is much commuting among jurisdictions, and cities house each others' workers in a very complex web of relationships. The important point is that impacts of residential development are only counted once.

With rental projects there is an additional issue of whether additional sources of assistance should be assumed in the analysis. Most rental projects built for lower income households have in recent years been developed using federal tax credits, state low interest financing from bond funds, and other resources. There is a difficulty in assuming that all projects for the lower income households will be developed using these outside sources, because these sources are not reliably available. Accessing these sources is also highly competitive due to the limited supply. Finally, the value of tax credits to the project can fluctuate widely. Determining the affordability gap assuming no outside sources is a sound and legitimate approach and one that the County has employed in other similar analyses, including the analyses in support of the affordable housing impact fees for non-residential construction. It is also consistent with the approach employed by the City of Sacramento.

The use of the affordability gap for establishing a maximum fee supported from the nexus analysis is grounded in the concept that a jurisdiction will be responsible for delivering affordable units to mitigate impacts. The nexus analysis has established that units will be needed at one or more different affordability levels and, per local policy, the type of unit to be delivered depends on the income/affordability level. In Sacramento County, the County will assist in the development of rental units.

Page 64 of 98

The units assisted by the public sector for affordable households are usually small in square foot area (for the number of bedrooms) and modest in finishes and amenities. As a result, in some communities these units are similar in physical configuration to what the market is delivering at market rate; in other communities (particularly very high income communities), they may be smaller and more modest than what the market is delivering. Parking, for example, is usually the minimum permitted by the code. In some communities where there is a wide range in land cost per acre or per unit, it may be assumed that affordable units are built on land parcels in the lower portion of the cost range. KMA tries to develop a total development cost summary that represents the lower half of the average range, but not so low as to be unrealistic.

If the affordability gap is the difference between total development cost and the affordable sales price, the question sometimes arises as to how total development cost is defined. KMA defines total development costs as including land costs, construction costs, site improvements, architectural and engineering, financing and all other indirect costs, and an allowance for an industry profit (non-profit developers receive a development fee instead).

In a healthy and stable economy, when projects are feasible, the sales price is therefore the same as the total development cost inclusive of profit. In some economic cycles sales prices might enable larger than standard profits, as was the case in the 2002 to 2004 period, for example, when sales prices escalated ahead of construction and land costs, and sales prices were achieved that enabled higher than standard profit margins. In other market cycles, such as the 2009 to today, sales prices are so depressed that they are not high enough to cover total development costs and there is no profit. Projects are not feasible during these periods.

## **Excess Capacity of Labor Force**

At the time this analysis has been conducted, the nation, regional and local economy are all experiencing a severe recession. Unemployment in California averages almost 10%. In this context, the question has been raised as to whether there is excess capacity in the labor force to the extent that consumption impacts generated by new households will be in part, absorbed by existing jobs and workers, thus resulting in fewer net new jobs.

In response, an impact analysis of this nature is a one time impact requirement to address impacts generated over the life of the project. A recession is a temporary condition; a healthy economy will return and the impacts will be experienced. In addition, because the nexus analysis is based on reduced housing prices, the impacts analyzed are less than would have been shown had the analysis been prepared when housing prices were at their peak, and the economy was healthier.

Finally, the economic cycle self adjusts. Development of new residential units is not likely to occur until conditions improve or there is confidence that improved conditions are imminent. When this occurs, the improved economic condition of the households in the local area will

BOS ATTACHMENT 1 Agenda Date: 02-11-2014 Page 65 of 98

\_

absorb the current underutilized capacity of existing workers, employed and unemployed. By the time new units become occupied, current conditions will have likely improved.

# The Burden of Paying for Affordable Housing

Sacramento County's inclusionary program does not place all burdens for the creation of affordable housing on new residential construction. The burden of affordable housing is borne by many sectors of the economy and society. A most important source in recent years of funding for affordable housing development comes from the federal government in the form of tax credits (which result in reduced income tax payment by tax credit investors in exchange for equity funding). Additionally there are other federal grant and loan programs administered by the Department of Housing and Urban Development and other federal agencies. The State of California also plays a major role with a number of special financing and funding programs. Much of the state money is funded by voter approved bond measures paid for by all Californians.

Local governments play a large role in affordable housing. In addition, private sector lenders play an important role, some voluntarily and others less so with the requirements of the Community Reinvestment Act. Then there is the non-profit sector, both sponsors and developers that build much of the affordable housing.

In summary, all levels of government and many private parties, for profit and non-profit contribute to supplying affordable housing. Residential developers are not being asked to bear the burden alone any more than they are assumed to be the only source of demand or cause for needing affordable housing in our communities. Based on past experience, the inclusionary program will fund only a small percentage of the affordable housing needed in Sacramento County.

## INTRODUCTION

This Appendix section provides the building blocks for the values used in other sections of this report, by establishing both market values and affordable values for various types of residential units or projects potentially developed in unincorporated Sacramento County.

It is noted that the market surveys and financial feasibility analyses were conducted in early 2013. By mid 2013 the market had experienced improvement, but is still depressed to the extent that none of the general conclusions in this analysis have been significantly altered.

#### A. MARKET RATE UNITS

In collaboration with County staff, four market rate residential prototypes were selected for analysis – three for-sale prototypes and one rental prototype. For each building prototype, two price points were selected, representing the approximate range of prices in the unincorporated county. The intent of the selected prototypes is to identify representative developments generally being built by the private marketplace in Sacramento County, or expected to be built as the market improves, in order to gain a general understanding of the economic opportunities and challenges of new residential construction.

The four prototypes are summarized in the following table. More detailed information about the prototypes is included in Appendix II Table 1.

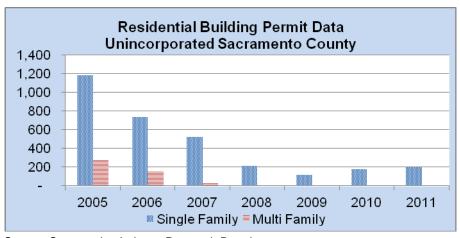

| Residential Prototypes                                | Density    | Avg. Unit Size |
|---|------------|----------------|
| For-Sale Prototypes*                                  |            |                |
| Lower Density Single Family Detached                  | 5 du/acre  | 2,200 sq. ft.  |
| 2) Medium Density Single Family Detached              | 7 du/acre  | 1,800 sq. ft.  |
| 3) Higher Density Attached (condominiums)             | 20 du/acre | 1,000 sq. ft.  |
| Rental Prototype*  4) 2- to 3-story Apartment Project | 20 du/acre | 950 sq. ft.    |

\*Note: In the residential nexus analysis, two price points for each prototype are being analyzed (a low price and a high price) representing the approximate range of prices in the unincorporated county.

Since the purpose of the analysis is to examine the impact that the County's Affordable Housing Ordinance has on market rate development projects that would be impacted by the County's affordable housing requirements, these prototypes are all 100% market rate projects.

## I. For Sale Residential Market Survey

As has been the case in most localities throughout the State of California, the unincorporated areas of Sacramento County have experienced a steep decline in both home values and construction activity since the onset of the recession. As shown in the following chart, residential building permit activity has declined precipitously between 2005 and 2011.

Source: Construction Industry Research Board

The median home price in Sacramento (single family and condominiums combined) has declined by almost 60% - from \$371,500 in June 2006 to \$158,000 in June 2011. There was a slight uptick in pricing in 2010 resulting from a temporary federal homebuyer tax credit. Home prices have generally been on an upward trajectory since 2011.

Source: California Association of Realtors, Dataquick

Of significance, many homes in Sacramento County have dropped to levels that are well within affordable prices for Low Income households (eligible to households earning up to 80% of AMI) and even Very Low Income households (up to 50% of AMI), although it is recognized that it remains very difficult for many Low Income and Very Low Income households to come up with the down payment and to secure the mortgage financing necessary to buy a home. In addition it is difficult for homebuyers to compete against the many investors in the market who are willing to purchase homes with cash and without many of the common homebuyer contingencies. The fact that market rate home prices in Sacramento are, in some cases, below the deed restricted affordable prices will present some challenges for successfully marketing and selling affordably priced homes.

## a) Current Trends/Outlook

Residential market conditions improved in 2012 with the June median home price moving up slightly to \$165,000. Additionally, a recent report by the Gregory Group indicated that home inventories (available homes for sale) in the Sacramento region are decreasing, which is having the effect of pushing home prices higher. In September, the National Association of Home Builders added Sacramento to their list of improving housing markets based on increased employment, home prices, and building permits.

In another encouraging sign, several economists and market participants including Beacon Economics and the National Association of Realtors, believe that a variety of regulatory and policy factors will help prevent the remaining shadow inventory of homes in the foreclosure process from swamping the market and undermining the housing recovery. Nonetheless, the housing recovery is expected to be a measured one, with the pace of recovery ultimately depending upon a number of factors such as continued improvement in the U.S. and regional economies, consumer confidence, and the ability of federal policy makers to keep mortgage interest rates at or near record lows.

## b) Intra-County Variation

Given its large geographic area, home values within Sacramento County vary significantly from one area to another. The following chart indicates the 2012 median home prices in the community areas of the county.

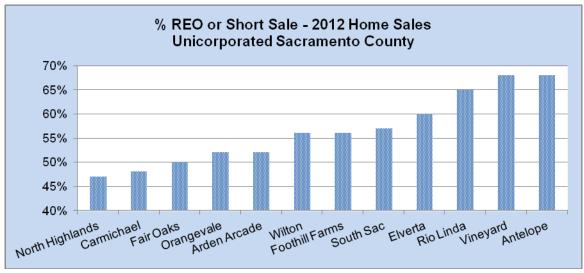

Source: Dataquick

Note: Source data is based on zip codes, which do not conform exactly with community boundaries.

## c) REO's & Short-Sales

The median home prices in Sacramento are heavily influenced by the number of short sales and bank real estate owned (REO) sales. As shown in the following chart, a significant percentage of 2012 sales in Sacramento County were REO or short sales, ranging from just above 45% in North Highlands and Carmichael to just above 65% in Vineyard and Antelope.

Source: Dataquick

The large magnitude of foreclosure-related sales continues to significantly drag down median home prices, which has the effect of distorting home prices that can be achieved in non-distressed sale situations. Nationwide home sales data indicates that homes in foreclosure or bank-owned were selling for about one-third less than non-foreclosure homes as of August 2012<sup>1</sup>.

## d) New Home Projects and Pricing

Focusing next on newly built homes, KMA researched asking prices of newly constructed homes currently on the market in unincorporated Sacramento County. Market research firm Hanley Wood identified just five single family home developments currently being marketed for sale in unincorporated Sacramento County. There were no attached condominiums on the market.

Source: Hanley Wood, project websites, KMA. See Appendix B for additional details.

Appendix II Table 2 contains the for-sale residential market survey. The survey includes the five projects identified above and, given the limited number of new projects in the unincorporated county, new projects also located in the cities of Elk Grove, Folsom, and Rancho Cordova.

# II. Rental Housing Market

The rental housing market in Sacramento County tends to be older building stock. Of the 82 market rate apartment projects in the unincorporated county tracked by market research firm RealFacts, only one was built since 2000 (The Crest at Fair Oaks, 2004) and only nine were built since 1990. Only one project was considered a Class A property with the balance considered Class C. County staff identified two other apartment projects that were built since 2000 – Arlington Creek and Antelope Springs Townhouses, both located in Antelope.

Unlike the for-sale housing market, the rental housing market did not experience a major downturn during the recent recession. Rather, the rental housing market has maintained relatively stable rents and occupancy rates, as summarized in the following chart. The average apartment rent in the unincorporated county declined by only about 6% from its high in 2008 to its low in 2010. The occupancy rate ranged from a low of 92.3% in 2009 to 94% in 2005 and 2007. An occupancy rate of ±95% is generally considered healthy in a normal market.

Source: RealFacts

<sup>\*</sup>Only includes models that are currently available and with a listed home price.

Page 74 of 98

KMA surveyed the rents of the market rate apartment developments in the unincorporated county built since 1990. For these properties, the rough range of rents is as follows. Additional information is contained in Appendix II Table 3.

| Unincorporated County Apartment Developments Built Since 1990 | Rent Range/Unit<br>(Average) | Rent Range/Sq. Ft.<br>(Average) |
|---|------------------------------|---------------------------------|
| 1-Bedroom   | \$600 - \$1,200 (\$785)      | \$0.90 - \$1.45 (\$1.10)        |
| 2-Bedroom   | \$725 - \$1,400 (\$940)      | \$0.65 - \$1.35 (\$1.00)        |
| 3-Bedroom   | \$1,100 - \$1,645 (\$1,300)  | \$0.90 - \$1.20 (\$1.10)        |

Source: KMA Survey

Sales of existing apartment developments in the Sacramento region have generally been of older Class C product, mirroring the predominance of older properties in the market. According to a recent report from Cassidy Turley, these sales transacted with cap rates in the 7.5% range. Higher quality, Class A product (mostly in the incorporated cities of Sacramento County) is in high demand by investors, but owners of these properties have been reluctant to put their properties on the market due to a sense that, because of the still-recovering market, it will take some time before these properties achieve optimal pricing. The few Class A properties that have sold recently have done so with cap rates of 6% or less<sup>2</sup>.

Unlike other housing markets like San Francisco, which are benefiting from strong growth in tech employment, the rental housing market in Sacramento County has not experienced substantially increased rents. As a result, there are no new market rate apartments in the development pipeline according to County Planning staff. At this point, rents have not increased to a level that makes new construction of apartment projects financially feasible, as further discussed below.

## III. Financial Feasibility Analysis

The purpose of the financial feasibility analysis is to gain an understanding of the economic opportunities and challenges of developing new market rate residential projects in Sacramento County today and how the possible modifications to the County's Affordable Housing Ordinance might impact project economics.

The intent is to evaluate the economics as they apply to the four aforementioned residential prototypes, recognizing that the economics of specific projects even within the same prototype can vary significantly based on location within the county and a variety of other factors. In addition, it is noted that the dearth of recent comparable land sale data at this time makes it especially difficult to analyze land values. As a result, it is difficult to say what the economics of

<sup>&</sup>lt;sup>2</sup> Cassidy Turley (4<sup>th</sup> Quarter 2012).

Page 75 of 98

a "typical" prototype project are in the county. For purposes of informing our overall analysis however, KMA has modeled the economics of each of the prototypes by estimating a "midpoint" condition with respect to both prices and development costs. By doing so, it is understood that there will be some projects that will look somewhat better and some that will look somewhat worse than what is shown. The primary economic factors that will vary from project to project include sale prices, land costs, off-site improvements, and fees and permits costs.

The assumptions used in the financial feasibility analysis were based on data gathered from a variety of sources including third party market and cost data sources, KMA's experience with residential projects in other assignments, and discussions with Sacramento developers and other housing stakeholders.

It is recognized that given the still challenging real estate market conditions, there is relatively little residential development occurring in Sacramento today, and some of the four prototypes in this analysis are essentially not being built at all. For example, there are no attached for-sale condominium projects being built nor are there market rate apartments being built.

# a) Summary of Financial Feasibility

The following table summarizes the outcome of the financial feasibility analysis. What it indicates is that the estimated mid-point price and development cost for all four prototypes does not yield a financially feasible project. For the Lower Density Single Family Detached and Higher Density Attached (condominium) prototypes, the achievable sale prices based on today's market is actually less than the costs of development including land acquisition, resulting in a negative return for the developer. For the Medium Density Single Family Detached prototype, the development return is not sufficient to justify the costs (should be at least 10% as further discussed below). The continued high inventory of foreclosure sales is having the effect of constraining price improvement and this will remain so until the inventory is significantly reduced.

The rental prototype is also infeasible in today's market, as the estimated value of the project at completion is less than the costs of development. More detailed information on the financial feasibility assumptions is contained in Appendix II Table 4.

| Summary of Project Returns | Sale Price<br>Range           | Mid-Range<br>Price/Value | (Less)<br>Costs | Project<br>Return | % of<br>Costs |
|----------------------------|-------------------------------|--------------------------|-----------------|-------------------|---------------|
| For-Sale Prototypes        |                               |                          |                 |                   |               |
| Lower Density SFD          | \$260k to \$320k              | \$290k                   | (\$303k)        | -\$13k            | -4%           |
| 2) Medium Density SFD      | \$235k to \$290k              | \$262k                   | (\$251k)        | +\$11k            | +4%           |
| 3) Higher Density          |                               |                          |                 |                   |               |
| Attached (condos)          | \$150k to \$225k              | \$187k                   | (\$238k)        | -\$51k            | -21%          |
| Rental Prototype           |                               |                          |                 |                   |               |
| 4) 2- to 3-story Apts      | \$1.20 to \$1.40<br>psf rents | \$156k/unit<br>(based on | (\$199k)        | -\$43k            | -21%          |

\$1.30 psf rent)

Required developer returns vary depending upon a variety of factors including the product type, project size, cost of capital, general market outlook, and overall risk profile of the project. For purposes of this initial feasibility analysis, we are assuming returns would need to be at least 10% of total development costs for the typical residential project. In order to achieve a return of 10% of total costs, sale prices and rental rates would need to increase in the range of 8% for the Medium Density Single Family Detached prototype, 20% for the Lower Density Single Family Detached prototype, and 25% for the Rental Apartment prototype. The sale price of the Higher Density Attached prototype (condominiums) would have to increase in the range of 45% for feasibility, however it is recognized that, of the four prototypes, this prototype exhibited the highest number of REO and short sales during the market downturn and therefore perhaps the most impacted by declining sale prices. As a final but important comment, construction costs and land values are also expected to rise along with improving market conditions and therefore residential sale prices will also need to keep pace with rising costs.

Notwithstanding the conclusions of this preliminary prototype analysis, there are in fact some new residential projects being built in today's market. There are several reasons why this might be the case: (1) higher achievable prices than the mind-point range expressed in KMA's analysis; (2) lower land acquisition costs (for example if land costs are treated as "sunk costs" by developers or if land is purchased from "distressed" sellers at highly discounted values); (3) lower offsite infrastructure requirements; or (4) home builders who will temporarily accept lower than typical profit margins in order to remain active and keep their construction crews employed.

It is clear that residential market conditions in Sacramento County are such that only a limited number of projects are financially feasible today. However, the market is now in the initial stages of a recovery with rising home prices and generally a more positive outlook by the development community. As the market continues its return to more healthy conditions, the financial feasibility numbers will likewise improve.

BOS ATTACHMENT 1 Agenda Date: 02-11-2014 Page 77 of 98

## b) Implications for Affordable Housing Ordinance

The aforementioned financial feasibility analysis assumes the applicability of the current affordable housing fees totaling \$5,500 per market rate unit. Any additional cost of incorporating affordable housing requirements into a project (whether it be higher fees, on-site affordable units, or off-site development/land dedication), will make financial feasibility more challenging in the near term. An additional problem is that many market rate housing projects are already priced below HUD/SHRA affordable levels, at least at the Low and Moderate Income levels. As a result, deed restricted units with similar pricing to market rate units will meet buyer resistance and not be marketable.

It is recognized that the imposition of affordable housing requirements creates financial feasibility challenges for some projects and therefore KMA recommends that the County consider current financial feasibility factors when modifications its Affordable Housing Ordinance are being evaluated. In addition, given that the housing market is still in the early stages of recovery, the County should continue to evaluate affordable housing requirements as they relate to improving market conditions.

## **B. AFFORDABLE UNITS AND AFFORDABILITY GAPS**

A key component of the nexus analysis is the size of the gap between what households can afford and the cost of producing new housing in Sacramento County, known as the "affordability gap." In this section, we document the calculation of the affordability gaps used in the nexus analysis.

## I. County Assisted Prototypes

For estimating the affordability gap, there is a need to match a household of each income level with a unit type and size according to governmental regulations and County practices and policies. Sacramento County intends to assist in the production of rental units for households in the Very Low (less than 50% of median income) and Low (50 - 80% of median income) income categories. KMA reviewed development pro formas for recent affordable rental developments assisted by the Sacramento Housing & Redevelopment Agency (SHRA) and concluded that, on average, the new affordable rental units have 1.5 bedrooms.

## II. Affordable Rent Levels

Affordable rent levels are a function of the income level for which the unit is aimed to be affordable; affordable rent levels are estimated by KMA in accordance with the County's Affordable Housing Program.

Page 78 of 98

Affordable rent is based on 30% of household income available for rent and utilities. KMA calculated the gross rents based on the 2013 California Housing and Community Development Department's (HCD) income limits, and used SHRA's estimated utility allowance. Typically, HCD uses the U.S. Department of Housing and Urban Development's income limits. However, the 2013 HUD income limits for Sacramento County actually dropped from 2012 levels. The 2013 income limits for Sacramento, therefore, reflect the implementation of HCD's 'hold harmless' policy, which allows the 2012 income limits to remain in effect instead of the lower income limits. Projects receiving federal assistance would have to meet the more strict HUD income limits.

Because the prototype has an average unit size of 1.5 bedrooms, KMA estimated the rent as an average of the affordable one-bedroom rent and the affordable two-bedroom rent and the utility allowance as the average of one and two-bedroom allowances. A one-bedroom unit is assumed to house a two-person household and a two-bedroom unit is assumed to house a three-person household, consistent with most local and state programs. In the table below, the affordable rents for the Very Low Income category are calculated.

| Sample Calculation of Affordable Rents, Very Low Income Households |          |          |          |  |  |  |  |  |
|--|----------|----------|----------|--|--|--|--|--|
| 1 Bedroom 2 Bedroom 1  |          |          |          |  |  |  |  |  |
| Area Median Income (AMI)   | \$60,900 | \$68,500 | \$64,700 |  |  |  |  |  |
| Very Low Income Limit (50% of AMI)                                 | \$30,450 | \$34,250 | \$32,350 |  |  |  |  |  |
| Gross Rent (30% of Monthly Household Income)                       | \$761    | \$856    | \$809    |  |  |  |  |  |
| Utility Allowance  | \$(52)   | \$ (70)  | (\$61)   |  |  |  |  |  |
| Affordable Rent Net of Utilities                                   | \$709    | \$786    | \$748    |  |  |  |  |  |

Affordable rents for each of the income limits adjusted for the utility allowance are presented below:

| Affordable Rents by Income Level |                  |                   |  |  |  |  |  |
|----------------------------------|------------------|-------------------|--|--|--|--|--|
| Very Low Income                  | 1.5 bedroom unit | \$748 per month   |  |  |  |  |  |
| Low Income                       | 1.5 bedroom unit | \$1,234 per month |  |  |  |  |  |

For more information on the calculation of these rents, see Appendix II Table 5. The rent levels as defined above (by unit size and income category) govern what the building owner may charge for a particular unit.

## III. Affordability Gaps

In a nexus study, the affordability gap is the amount of subsidy dollars required to bridge the difference between total development costs and the unit value of the rental units. The unit value of an affordable rental unit is calculated by capitalizing the net operating income generated by the unit.

Page 79 of 98

## a) Development Costs

For the purposes of the nexus analysis, KMA prepared an estimate of total development cost for typical affordable rental units. Total development costs include land, direct construction, all fees and permits, financing and other indirect costs, including profit. KMA drew this estimate from a review of development pro forma for recent affordable rental developments assisted by the Sacramento Housing & Redevelopment Agency (SHRA). KMA concluded that, on average, the total development costs equal to \$223,000.

For many new developments, particularly County-assisted developments, total development costs could be higher than those estimated here. The conservative estimate of development costs results in a lower supportable nexus amount.

For the purposes of estimating the affordability gaps, we do not assume additional sources of affordable housing financing such as the federal income tax credit program. While many of the recent housing developments assisted by SHRA utilized these additional funding sources, it is not assured that these sources will be available in the future. Accessing these sources is also highly competitive due to the limited supply. Finally, the value of tax credits to the project can fluctuate widely. Determining the affordability gap assuming no outside sources is a sound and legitimate approach, and one that the County has employed in other similar analyses.

For reference, KMA also produced an estimate of the affordability gaps assuming tax credit financing is available. The estimate was based on projects assisted by SHRA, and represents a mix of 4% and 9% tax credit projects. The resulting affordability gaps are, of course, lower than when tax credit financing is not assumed. The lower affordability gap would result in lower total supported nexus costs. The affordability gaps assuming tax credits are shown in Appendix II Table 6.

## b) Unit Values

To calculate the value of the restricted units, KMA first estimated the Net Operating Income generated by the units. The first step is to convert monthly gross rent to an annual gross rent by multiplying by 12. Annual gross rent is then adjusted for vacancy rates during turnover, and then operating costs are netted out. Lost income due to vacancy is estimated at 5% of gross rents. Operating costs cover management, property taxes, and certain other expenses. Based on KMA's experience reviewing operating budgets for affordable apartment projects proposed or built in Sacramento County, the operating expenses are estimated at \$4,800 per unit per year excluding property taxes. Property taxes are estimated at 1.25% of the unit's capitalized value. Net Operating Income is calculated by netting out vacancy, operating costs and property taxes from the gross income generated by the unit. NOI is then capitalized at 6.75% to estimate the value of the restricted units. The results are summarized below and shown in Appendix II Table 5.

Page 80 of 98

| Supported Unit Values |                      |            |
|-----------------------|----------------------|------------|
|                       | Net Operating Income | Unit Value |
| Very Low Income       | \$3,366 per year     | \$50,000   |
| Low Income            | \$7,960 per year     | \$118,000  |

As shown in the table above, Very Low and Low Income units generate a small amount of income in excess of operating expenses. However, neither unit generates enough capitalized value to cover total development costs of the unit. The resulting gap between unit value and development costs is referred to as the Affordability Gap.

# c) Affordability Gaps

The affordability gap conclusions are presented in Appendix II Table 5 and summarized below.

| Affordability Gaps |            |                  |                   |
|--------------------|------------|------------------|-------------------|
| Income Level       | Unit Value | Development Cost | Affordability Gap |
| Very Low Income    | \$50,000   | \$223,000        | \$173,000         |
| Low Income         | \$118,000  | \$223,000        | \$105,000         |

These affordability gaps represent the mitigation cost to the County per affordable unit, by income level. They are entered into the nexus analysis to calculate the maximum supported impact fees.

<sup>(1)</sup> Fees & Permits costs vary by location within Sacramento County. The estimated Fees & Permits costs are averages based on estimates for the South Sacramento, Carmichael, East Antelope, and North Vineyard Station areas (source: County Housing Element).

<sup>(2)</sup> There are no new attached units currently being marketed in unincorporated Sacramento County. The estimated price is based on resales of newer condo units, many of which were REO and short sales, and an estimated premium for new construction.

<sup>(3)</sup> See report text for discussion of typical developer returns.

(This page intentionally left blank.)

Page 93 of 98

## INTRODUCTION

In 1990, Sacramento County established a fee on non-residential development as a source of revenue for the Housing Trust Fund to increase the supply of housing affordable to Very Low Income Households. The County's Affordable Housing Ordinance includes an option for residential projects to pay an impact fee, which also funds affordable housing. The material provided in this Appendix addresses the potential for overlap between the two obligations and any possibility of double counting.

This Appendix is not intended as a stand-alone document; it accompanies the Residential Nexus Analysis, an analysis of new market rate residential projects prepared for the County in August 2013. Reference is also made to a jobs housing nexus analysis report entitled Housing Trust Fund Nexus Analysis, prepared for Sacramento County in 2006, also by Keyser Marston Associates. This analysis was not formally presented to the Board of Supervisors, and therefore not accepted by the Board. Material in these reports explains terms, methodology, and the findings for the analysis.

## A. BACKGROUND AND CONTEXT

Sacramento County established a fee on non-residential construction to help mitigate the impacts of new jobs associated with the development of new non-residential buildings on the demand for very low income affordable housing in Sacramento County. KMA conducted a Non-Residential Nexus Analysis for the City and County pre-1990 and an update in 2006. The County did not adjust its existing fees as a result of the update analysis. The fee is charged on almost all new non-residential construction in the County.

To briefly summarize the Non-Residential Nexus Analysis (which is a jobs-housing nexus analysis), the logic begins with jobs located in new workplace buildings such as office buildings, retail spaces and hotels. The nexus analysis then identifies the compensation structure of the new jobs depending on the building type, the income of the new worker households, and the housing affordability level of the new worker households, concluding with the number of new worker households in the lower income affordability levels.

Some of the jobs that are counted in the Non-Residential Nexus Analysis are also counted in the Residential Nexus Analysis. The overlap potential exists in jobs generated by the expenditures of County residents, such as expenditures for food, personal services, restaurant meals and entertainment. Many jobs counted in the residential nexus are not addressed in the jobs housing analysis at all. For example, school and government employees are counted in the residential nexus analysis but are not counted in the jobs housing analysis which is limited to private sector office buildings, hotel, commercial, manufacturing, research and development, and warehouse projects.

Page 94 of 98

Theoretically, there is a set of conditions in which 100% of the jobs counted for purposes of the Non-Residential Nexus are also counted for purposes of the Residential Nexus Analysis. For example, a small retail store or restaurant might be located on the ground floor of a new condominium building and entirely dependent upon customers from the condominiums in the floors above. The commercial space on the ground floor pays the Non-Residential fee and the condominiums are subject to the Affordable Housing Ordinance. In this special case, the two programs mitigate the affordable housing demand of the very same workers. The combined requirements of the two programs to provide inclusionary units and/or fund construction of affordable units must not exceed 100% of the demand for affordable units generated by employees in the new commercial space. Note that the Non-Residential fee generates funds to mitigate the demand for housing generated by Very Low Income households only, while the Residential fee also includes the demand for Low Income households as well.

Complete overlap between jobs counted in the Non-Residential Nexus Analysis and jobs counted in the Residential Nexus Analysis could occur only in a very narrow set of circumstances. The following analysis demonstrates that the combined mitigation requirements do not exceed the nexus even if <a href="every">every</a> job counted in the Residential Nexus Analysis is also counted in the Non-Residential Nexus Analysis.

## **B. NON-RESIDENTIAL REQUIREMENT AS A PERCENT OF NEXUS**

The Non-Residential Nexus Analysis report was prepared by KMA in 2006. To evaluate the combined programs today, KMA updated the affordability gap figures to reflect today's development costs. The total updated nexus costs per square foot are shown on Appendix III Table 1 and summarized below. The total nexus cost is the maximum mitigation amount, or maximum fee that could be charged, supported by the analysis. The current fee charged by Sacramento County is indicated below and shown as a percent of the total updated nexus cost.

|                        | Total Current<br>Nexus Amount | Current Fee | Percent of Nexus |
|------------------------|-------------------------------|-------------|------------------|
| Office                 | \$9.28                        | \$0.97      | 10.4%            |
| Hotel                  | \$65.34                       | 0.92        | 1.4%             |
| Research & Development | N.A                           | 0.82        | N.A.             |
| Commercial             | \$86.42                       | 0.77        | 0.9%             |
| Manufacturing          | \$10.56                       | 0.61        | 5.8%             |
| Warehouse              | \$4.47                        | 0.26        | 5.8%             |

The conclusion is that the current fee levels represent 1.4% to 10.4% of the nexus cost. As a result, the Non-Residential fee mitigates less than 10% of the net new demand for affordable units generated by the new non-residential space.

Page 95 of 98

## C. PROPOSED AFFORDABLE HOUSING ORDINANCE

Sacramento County proposes to revise the Affordable Housing Ordinance affecting residential development projects. The fee option is expected to remain as one of the means of compliance for most projects. The fee level has not yet been proposed, so for purposes of this analysis, KMA has suggested that a range be tested, using the current fee of \$5600 per unit at the low end and the original fee of \$10,000 per unit to represent the high end. The rental project fee level for testing purposes is the current fee at \$5,600 although the proposed fee will likely be considerably lower given the feasibility challenges of apartment development in the current market.

The tables below compare the supported nexus amounts for Very Low Income Households (from Appendix I Table C-10) with the proposed requirement for the ownership prototypes. The nexus analysis report determines the maximum supported fee separately for the Very Low Income tier and the Low Income tier. If the total fee is assigned to the Very Low Income tier alone, the results would be as follows:

| Current and Proposed Fee a | s Percent c       | of Maximun | n Nexus Amo        | unt      |                         |          |
|----------------------------|-------------------|------------|--------------------|----------|-------------------------|----------|
|                            | Lower Density SFR |            | Medium Density SFR |          | Higher Density Attached |          |
| Price Point                | Lower             | Higher     | Lower              | Higher   | Lower                   | Higher   |
| Maximum Nexus Amount       | \$18,600          | \$22,000   | \$16,300           | \$19,600 | \$11,500                | \$15,300 |
| Current Fee                | \$5,600           | \$ 5,600   | \$5,600            | \$5,600  | \$5,600                 | \$5,600  |
| As Percent of Nexus Amount | 30%               | 25%        | 34%                | 29%      | 49%                     | 37%      |
| Potential Fee – High End   | \$10,000          |            | \$10,000           |          | \$10,000                |          |
| As Percent of Nexus Amount | 54%               | 45%        | 61%                | 51%      | 87%                     | 65%      |

| Current and Proposed Fee as Per | cent of Maximum Ne | xus Amount, Cont'd |
|---------------------------------|--------------------|--------------------|
| Income Category                 | 2-3 Story Apa      | artment Complex    |
| Price Point                     | Lower              | Higher             |
| Maximum Nexus Amount            | \$13,100           | \$14,500           |
| Current Fee                     | 5,600              | 5,600              |
| Fee as Percent of Nexus         | 43%                | 39%                |

Note that the Lower and Higher scenarios refer to pricing, both current and with a market recovery projection, as explained in the report.

The conclusion is that the current fee level (\$5,600) in the Affordable Housing Ordinance represents 25% to 49% of the maximum supported by the analysis, depending on the prototype and pricing scenario. When a higher fee level of \$10,000 per market rate unit for for-sale type units is tested for illustrative purposes, the percentage of the supported nexus ranges from 45% to 87% in one case.

Page 96 of 98

## D. COMBINED REQUIREMENTS WITHIN NEXUS

The test to confirm that there is no double counting requires combining the two obligations by adding the percents of the calculated nexus to determine whether they total more than 100%. Any scenario with 100% overlap is highly hypothetical and virtually impossible in the real world, but for illustrative purposes, the analysis is provided.

The Non-Residential housing fee with the highest percent of nexus is for office use at 10.4%; thus even when combined with the residential high of 87% for one of the numerous scenarios, the result is still under 100%. Rather than office uses, commercial uses, such as restaurants or shops would be the most likely use of the ground floor space of the multifamily residential building, that could be possibly supported by the residents above. The fee level for commercial uses is less than 1% of the total calculated nexus and thus combined with any of the maximum residential nexus amounts would represent well under 100%. Therefore, the combined affordable housing mitigations would not exceed the nexus even if there were 100% overlap in the jobs counted in the two nexus analyses, a virtually impossible scenario in any case.

# NOTICE OF EXEMPTION

**Project Title:** 

AFFORDABLE HOUSING ORDINANCE

**Control Number:** 

PLNP2013-ZOB-00179

**Project Location:** 

Unincorporated areas of Sacramento County

APN:

Various - County-wide

#### **Description of Project:**

The proposed project consists of repealing the existing Affordable Housing Ordinance and adoption of a new ordinance.

The existing ordinance requires development projects of five units or more to produce 15 percent of the project's dwelling units at affordable rents or prices. The ordinance allows this be accomplished by either constructing the affordable units, or by the dedication of land and paying an affordability fee. Projects under 100 units can pay an in lieu fee instead. The current ordinance requires the program to produce six percent of the units for Low Income, six percent for Very Low Income and three percent for Extremely Low Income (ELI).

The new ordinance requires the construction of units, or the dedication of land to accommodate the units required by an eight percent obligation and a fee of \$1.25 per square foot. Projects not in master plan areas and under 750 units can pay an affordability fee of \$2.50 per square foot. In the master plan areas or projects 750 units or larger, the construction or land dedication options will be approved via a development agreement (DA) and a third option is allowed that allows for the production of an equivalent number of affordable units. Additionally, projects that have an existing affordable housing plan may use their existing plan. The proposed program requires that four percent of the units be for Low Income, four percent for Very Low Income and that that County will set aside at least 10 percent of the funds collected to buy down units for ELI households.

#### Name of public agency approving project:

Sacramento County

#### Name of person or agency carrying out project:

Sacramento County Department of Community Development Planning and Environmental Review Division Attn: Cindy Storelli

## **Exempt Status:**

GENERAL RULE [Section 15061(b)(3)] STATUTORY EXEMPTION--15267

## Reasons why project is exempt:

The project consists of the adoption of an ordinance to provide financial assistance for the development and construction of residential housing for persons and families of low and very low income. It can be seen with certainty that there is no possibility that the activity in question may have a significant impact on the environment and is therefore exempt from the provisions of CEQA.
